1
2 [BE: Much of the text at the document’s start deals with processes far-removed from the ACF and its
3 management needs and actions, sometimes repetitively. As one reader of an earlier draft noted, “The
4 overture to the main act is being prolonged.”Many pages below could be moved to the Appendix, a
5 separate account of the ACFC’s history and personnel, and/or greatly shortened.]
6

7 **1. Introduction, Process History, Land Acknowledgement, and** 8 **Governance Guidelines**

9 **1.1 Introduction to this document**

10 This document serves as the Comprehensive Management Plan for the Andrews Community Forest
11 (ACF). BE: The first iteration of this document was accepted by the Selectboard in November 2018.
12 The Management Plan underwent a full revision in 2022-2026 by the Andrews Community Forest
13 Committee (ACFC). Revisions included adding an Indigenous land use acknowledgment, replacing the
14 original recreational trail design concept with a new trail design based on ecological assessments, along
15 with textual reorganization, updates, clarifications and corrections. *BE: Suggest replacing this paragraph
16 with: It was revised and updated in 2025. Major changes include an Indigenous land use
17 acknowledgment, a more comprehensive and updated description of the ACF’s ecological importance
18 replacing the original recreational trail design concept with a new trail design based on ecological
19 assessments, along with textual reorganization, updates, clarifications and corrections. All will help
20 inform a new, sustainable trail design and other management actions.*

21 **1.2 Acquisition and Conservation of the Andrews Community Forest**

22 In 2018, the Town of Richmond, with the assistance of Vermont Land Trust, purchased a 428-acre,
23 largely wooded parcel from the Andrews family to create a new community forest. Simultaneous with the
24 sale, a [Conservation Easement](#) (Appendix A) was conveyed to both the Vermont Land Trust and the
25 Vermont Housing and Conservation Board to protect the property’s natural resources and ensure public
26 access in perpetuity. *[BE: Next paragraph is repetitive and could be deleted.]*
27

28 Vermont Land Trust acts as the primary easement steward. As the primary easement steward, Vermont
29 Land Trust (VLT) must conduct annual monitoring to ensure activities on the property are consistent with
30 the terms of the easement. The easement steward is also the Committee’s primary contact at VLT for
31 reviews and approvals of proposed actions which are not contemplated in the Management Plan.
32

33 The Easement (Appendix A) requires a Management Plan and any future changes to the Management
34 Plan must be reviewed and approved by Richmond’s Selectboard and by VLT. Section 1.B. of the
35 Conservation Easement dictates what information the Management Plan must include. Public input is
36 required for any updates to the Plan.

37 **1.4 Indigenous Land Acknowledgment**

38 Andrews Community Forest is located within Ndakinna (in-DAH-kee-NAH), the homeland of the
39 Western Abenaki people, who have a unique connection to this land and have been its traditional stewards

1 for millennia. For many generations before the European colonists arrived, the Abenaki people harvested
2 animals, nuts, plants, berries, fiber, and timber in these forests, without degrading their ecological health.
3 The Indigenous people who preceded the colonists created an extensive system of trails throughout the
4 Green Mountains that attest to the extended relationships between the Abenaki people and other tribes,
5 who also used these forests, and who took refuge here as the settlers drove them from their homes.
6 The Town of Richmond acknowledges that we have access to this land because it was taken without
7 consent and that our ability to make decisions about its management rests on this historic injustice. The
8 Andrews Community Forest Committee therefore acknowledges the Abenaki people’s rights to use this
9 land in perpetuity and welcomes the Abenaki people as partners in our forest management. We aim to
10 honor and respect the Abenaki people through responsible forest management and sustainable land use.
11 We will strive to incorporate Traditional Ecological Knowledge into our management practices to foster a
12 healthy forest community and to restore a healthy balance between human needs and the needs of the
13 **nonhuman people** [SP comment: What does this mean and how does it pertain to ACF? IS suggestion: change
14 to ‘other species’] [IS Comment: Suggest changing to ‘nonhuman species’] of the forest (**Appendix B**
15 **Indigenous recognition**). We say their name, and we name trails using the Western Abenaki language, to
16 remind us that the Abenaki people are the Original People of the Dawnland, Ndakinna, out of respect for
17 their culture and special relationship to the land, and to acknowledge their historic and ongoing
18 contributions to our community.

19 **1.5 Governance of the Andrews Community Forest**

20 *[BE: Doesn’t saying the Town is “ultimately responsible” for management and stewardship conflict with*
21 *text above naming VLT as the “primary easement steward”?* As a municipally-owned property, the Town
22 of Richmond Selectboard is ultimately responsible for the management and stewardship of the Andrews
23 Community Forest, with responsibility delegated to the “Andrews Community Forest Committee,”
24 (ACFC). The ACFC is charged with meeting the priorities and goals outlined in the Town Forest
25 Management Plan as directed by the Selectboard or Town Manager and subject to the [ACFC Bylaws](#).
26 *[BE: That “or” seems unnecessary, and vague as to what governs the directions of the SB and Town*
27 *Mgr.]*

28
29 The ACFC is a **nine** person committee [MW comment: was 7-9 should be nine]. The Richmond
30 Conservation Commission and the Richmond Trails Committee each appoint a current member of their
31 respective committee to sit on the ACFC. Additionally, the Conservation Commission and Trails
32 Committee shall each recommend one person who is not a member of their respective committee for
33 appointment to the ACFC. In order to incorporate Indigenous perspectives and traditional ecological
34 knowledge into ACF management, the ACFC will seek to fill at least one of its seats with an Abenaki
35 tribal citizen (see **Appendix B: Indigenous recognition**). **ACFC will engage with the local Abenaki**
36 **community to identify potential ACFC members.** [SP comment: When does this happen? Every time a
37 **seat opens? Have we been doing this?]** [BE: Good question.]

38 **1.6.1 Purpose of the Committee**

39 **VISION:** The Andrews Community Forest will serve Richmond as a thriving ecosystem where
40 conservation, education, and recreation harmoniously coexist. Through sustainable management
41 practices, we aim to preserve the forest's ecological integrity and contributions to its forest block, while

1 providing opportunities for local community engagement, environmental education, innovative forestry
2 practices, and outdoor recreation. Together, we strive to create a model of responsible land management
3 where generations connect with and enjoy nature, share in the Forest’s stewardship, and foster a deep
4 appreciation for the rich biodiversity and cultural heritage of our region.

6 **MISSION** (representing a concise form of the ‘Purposes’ spelled out in the Easement):
7 Our mission is to manage the Andrews Community Forest to uphold the Purposes and other
8 directives of the Conservation Easement as well as those found in applicable local, state and
9 federal policies and mandates. We will: *[BE: Good to refer to the all-important Purposes but their order
10 shouldn’t be flipped. Note suggested change.]*

11 1. **Protect its productive forestland, wildlife habitats, biological diversity, natural communities, riparian
12 buffers, wetlands, soil and water quality, and native flora and fauna, along with the ecological processes
13 that sustain them.**

14 2. Keep the ACF available for public use and enjoyment, including non-motorized, non-commercial
15 recreational, educational, and other appropriate community uses.

16
17 3. **Conserve the ACF’s open space values and scenic resources for current and future generations**

18 4. Guide the Forest’s management through open, public discussions and decision-making.
19 *[BE: This seems repetitive and, at this point, needlessly detailed.]*

20
21 *[SP Comment: Why has the following been removed? Should it be moved to section 1.5? IS Comment:
22 this is the current text, shown as deleted here for the record, as it’s replaced by VISION/MISSION above]
23 [IS Comment: This ‘Purpose’ is in the current Management Plan. It’s now replaced by VISION and
24 MISSION. The left the following text with ‘strikethrough’ in place to provide a comparison.]*

25 ~~The purpose of the Andrews Community Forest Committee is to:~~

- 26 ● ~~Serve as representatives of the Town in decisions related to the management of the Andrews-~~
27 ~~Community Forest, with ultimate approval of the Selectboard.~~
- 28 ● ~~Oversee management of the Community Forest responsibly and in accordance with the~~
29 ~~Comprehensive Management Plan, the Conservation Easement, and the Forest Management Plan.~~
- 30 ● ~~Act as a liaison with the Vermont Land Trust when input or approval is needed.~~
- 31 ● ~~Lead the management planning process whenever updates are needed to the Comprehensive~~
32 ~~Management Plan.~~
- 33 ● ~~Provide regular opportunities for public engagement with the Community Forest and in the~~
34 ~~planning/management of this community-owned property.~~
- 35 ● ~~Educate the public about the Community Forest.~~

36
37 ~~Furthermore, the ACFC agrees to strive towards the following guiding tenets:~~

- 38 ● ~~Demonstrate an ongoing commitment to providing meaningful public access and outdoor~~
39 ~~recreation opportunities while simultaneously providing meaningful natural resource protection.~~
- 40 ● ~~Demonstrate an ongoing commitment to learning more about the property and its natural history.~~
- 41 ● ~~Demonstrate an ongoing commitment by the committee to work together across differences as~~
42 ~~representatives of the Town and all of its residents.~~

2. History, Background and Existing Conditions

Documentation about the ACF and its surrounding lands is available via State resources updated with new information provided by the Vermont Agency of Natural Resources (ANR) through its 2024 [Vermont Conservation Design](#) initiative and updated [BioFinder](#) web site (together with continuing updates by VGIS ([Link?](#))). Specific ACF and local sources include Arrowwood's [Science to Action](#), UVM [Field Naturalist Report](#) (Glynn, G., Hagen, E., & Naughton, M. (2019, January). Landscape Analysis and Wildlife in the Andrews Community Forest, Richmond, Vermont. University of Vermont). These provide appreciation of key landscape features and the wildlife and ecology. These resources also inform decisions regarding Forest uses in general and as stipulated by the Forest [Easement](#) (the [Richmond Town Plan](#) and other governing Documents (Richmond Zoning and State and Federal laws and regulations).

2.1 General Property Description and Background

The Andrews Community Forest is a 428-acre largely forested parcel just outside Richmond Village in Chittenden County. The property is a diverse forestland with two small meadows. It has an abundance of hard-mast stands, predominantly oak and beech, that serve as important habitat for many species of wildlife. The forest includes several patches of Dry Oak Forest, Dry Red Oak-White Pine Forest, and Dry Oak-Hickory-Hophornbeam Forest, which are uncommon natural communities in Vermont. The property also has low elevation, southerly facing hemlock stands, which are used as winter deer yard. Recent timber harvesting and blowdown events have created patches of young forest and early successional habitat. *[BE: Some of Ethan's more recent work to accelerate early successional growth is in the east. Maybe just avoid designating any specific part.]*
[BE: Though all of the following is true, the description should be made from the perspective of Vermont Conservation Design and its three-tiered approach to ranking the conservation values of land across the state. Earlier studies could be mentioned, but if those are the only references this feels dated and lacking the cohesiveness that VCD brings to the table.]

Overall, this forest, especially as part of a larger, connected forest block, is a well-conserved wildlife habitat. The forest is one of eight large parcels that originally inspired the Chittenden County Uplands Conservation Project (CCUCP). The CCUCP (Community Strategies for Vermont's Forests and Wildlife A Guide for Local Action Page 35. [Case Study: Chittenden County Uplands Conservation Project](#)) is a landscape-scale conservation effort with over a dozen partners working to conserve ecologically and culturally important forest blocks and habitat connectors between and alongside Camel's Hump State Park and Mount Mansfield State Forest. The Andrews Community Forest abuts 6,000 acres of forestland that itself is adjacent to the 72,000-acre Mt. Mansfield Forest Block. This largely conserved forest block is a critical wildlife corridor and has been ranked in the top 3% of the state's wildlife habitat blocks by the Vermont Department of Fish and Wildlife. The forest has several headwater streams ([Figure 1](#)) that flow into the Winooski River and then on to Lake Champlain. The property also includes a small beaver pond, wetlands, and at least two vernal pools.

[Good points below, but this early in the document it feels like we're delaying getting to the meat by including text that would be better placed later in the document. That would enable us to include other challenges ACF faces, like invasive plants, insects and diseases, and the effects of our changing climate.]

Vermont is losing over 14,000 acres of forestland a year to development, so the conservation of the Andrews Community Forest and associated forest block is of key importance. Further, the global loss of

1 biodiversity to habitat fragmentation, environmental degradation, and climate change also emphasize the
2 need to sustain the ACF's many ecological resources.

3
4 *[BE: Much of the 2.2 section is consolidated into a general "Ecological Resources" section later in this*
5 *draft (but would come earlier in the final version once earlier material is moved, edited or deleted.)*

6 **2.2 Geology, Topography, and Climate**

7 **2.2.1 Topography and Aspect**

8 The Andrews Community Forest is mostly south-facing, with elevations ranging from 400' to 1240'
9 above mean sea level. Much of the terrain is steep but there are some flatter areas north of the parking lot
10 and along the forest's southeastern boundary.

11 **2.2.2 Biophysical Region**

12 The Andrews Community Forest is located within the Green Mountains Biophysical Region, near its
13 boundary with the Champlain Hills Region LR-1. This region is part of the Appalachian Mountain chain
14 that extends from Alabama north to Québec. It includes Vermont's highest mountain (Mount Mansfield at
15 4,393 feet) and includes its coldest climate, and the greatest annual precipitation (72 inches). The bedrock
16 is primarily acidic, composed of non-calcareous schists, phyllites, gneisses, and granofels. Northern
17 hardwood forests blanket the region on the mountain slopes up to about 2,500 feet, above which yellow
18 birch and red spruce are dominant. Spruce-fir forests occupy the higher slopes and summits, with alpine
19 meadows above 3,500 feet. The extensive, unfragmented forests of this region provide habitat for many
20 species of wildlife that thrive in remote, interior forest conditions. The high elevation forests of this
21 region and the Southern Green Mountains provide habitat for several species of birds, **important? Why**
22 **these? including Bicknell's thrush, Swainson's thrush, and blackpoll warbler.** *[MW Comment: Section*
23 *2.2.2 names the three birds because they are in decline (Bicknell's and Swainson's thrushes) or rapid*
24 *decline (Blackpoll Warbler) in New England. You can see the decline numbers for each species over the*
25 *last 15 years on State of the Mountain Birds website. They are named specifically because their habitat is*
26 *also declining.]* The heavy precipitation and deep snows in the mountains feed some of the state's largest
27 rivers, including the Missisquoi, Lamoille, Winooski, and White. Floodplain forests were once common
28 along these rivers, but they are now mostly converted to agriculture.

29 **2.2.3 Bedrock Geology**

30 The Andrews Community Forest contains both Underhill and Pinnacle bedrock Formations. The western
31 part of the forest, from its northernmost point over is Underhill, and the eastern area is Pinnacle. Both
32 formations are metamorphic sedimentary rocks, formed by sediments collecting at the bottom of an
33 ancient sea, stacking on top of each other, then metamorphosing and compacting into rock during the
34 Taconic Orogeny, the event that created the Green Mountains. As metamorphic rocks, they are typically
35 dense and non-porous and have cracks and visible fractures.

36

1 The Pinnacle Formation is made of schistose greywacke rock, metamorphosed from bits of rock, mud,
2 and debris that had already broken down somewhat from their original state. It is gray to buff in color and
3 the stripes of varying layers in the rock are generally visible. The minerals present are quartz, sericite,
4 biotite, and chlorite. The formation dates back at least to the Cambrian Period, 500 to 630 million years
5 ago.

6
7 The Underhill Formation is a silvery-green color and a combination of phyllite and schist rocks. The
8 minerals present are chlorite, muscovite, and quartz. Compared to the Pinnacle Formation, the Underhill
9 Formation bedrock also dates back to at least the Cambrian Period but has coarser grains.

10

11 **2.2.4 Surficial Geology**

12 Surficial geology refers to loose materials deposited above the bedrock layer by wind, water, or glaciers.
13 Like much of the Green Mountain Region, the Andrews Community Forest is covered in rocks deposited
14 when the glaciers receded at the end of the last ice age (roughly 14,000 years ago). Fine silt, pebbles,
15 stones, and boulders of all sizes deposited by glaciers are known as glacial till. The glacial till covers the
16 underlying bedrock surface to form the surface shape of the visible landscape. In addition to glacial till,
17 soil particles deposited by the post-glacial Lake Vermont, which filled much of the Champlain and
18 western Winooski River Valley following the retreat of the Laurentide Ice Sheet up to an elevation of
19 about 600 feet above sea level, cover much of the southern portions of the Andrews Community Forest.

20

21 In the Andrews Community Forest, where the bedrock is not exposed, till covers the land and is the
22 source of stones in the forest's rocky soils. The glacial till is thicker in the valleys and thinner in the
23 uplands. Many of the exposed uplands in the forest have experienced significant post-glacial erosion,
24 leaving only rubble and scattered boulders on top of the bedrock.

25 **2.3 Climate**

26 While the Andrews Community Forest is part of the Northern Green Mountains biophysical region, which
27 has a cooler climate and more precipitation than other portions of the State, it is significantly influenced
28 by the Champlain Valley biophysical region, which is warmer and features a longer growing season than
29 most other parts of Vermont. Coupled with its southerly aspect, this produces a forest dominated by tree
30 species adapted to warm, dry sites with poorer soils on upper elevations, and those adapted to slightly
31 richer forest soils on lower elevations (due to the influence of Lacustrine deposits).

32 **2.4. Cultural History (Cecilia)**

33 **2.4.1 Indigenous History**

34 Richmond is located within Ndakinna (in-DAH-kee-NAH), the homeland of the Western Abenaki people,
35 also known as the Original People, who have a unique connection to this land and have been its
36 traditional caretakers since at least the last Ice Age. For hundreds of generations before the European
37 colonists arrived and applied their own borders and labels, the Western Abenaki people lived and worked
38 on this land, stewarding resources in an ecologically sustainable way. Given that ACF lies along

1 important east-west and north-south transportation and trade routes, other tribes are likely to have visited
2 the forest as well.

3 Abenaki oral tradition and written accounts, historical resources, and archaeological studies of prehistoric
4 sites in Richmond inform our understanding of how the ACF landscape has been stewarded and its
5 continued importance to Indigenous people of our town and region. General resources include books such
6 as those by Wiseman (1995, 2001), an Abenaki elder and scholar, and Haviland and Power (1994), as
7 well as numerous online resources. Appendix 3 in Wiseman (2001) lists many written, video, and
8 museum resources regarding Abenaki cultural history.

9 Specifically for the Richmond area, archaeological studies in the 1990s near the bridges in Jonesville over
10 the Huntington and Winooski rivers have yielded valuable physical evidence of occupation and forest use
11 by Indigenous peoples before colonization (Thomas et al. 1995; Doherty et al. 1996). These sites were
12 radiocarbon dated to approximately 1040 AD (near Winooski bridge) and 1500 AD (near Huntington
13 bridge), and thus considered to represent the Middle to Late Woodland period. The sites show that
14 animals “including black bear, deer, beaver, porcupine, muskrat, fisher, mink, skunk, cottontail, red
15 squirrel, and chipmunks were taken for both meat and pelts. Various nuts, including butternut, hickory
16 nuts, beech nuts, and acorns from red oak” were also collected and processed for consumption and storage
17 (Thomas et al. 1995). Diverse tree species were used for firewood at the Huntington River site, including
18 beech, maple, birch, red pine, eastern hemlock, elm, eastern hophornbeam, eastern cottonwood, red pine,
19 and possibly alder. No evidence of maize was found at these sites, even as maize, beans, and other plants
20 were being cultivated at that time along the Winooski River closer to Lake Champlain. Thomas (2008)
21 surmises that these Jonesville sites were seasonal encampments occupied between September and late
22 December/early January to collect and process forest resources. Such findings suggest that the forests
23 where ACF is now located were largely stewarded and used for hunting and gathering, rather than
24 agriculture. This pattern concurs with broader geographical accounts of Abenaki practices, such as
25 Wiseman (2001:27), who stated that the Abenaki “... had smaller seasonal camps along most rivers eight
26 thousand winters ago” and described gathering and hunting activities in the uplands.

27 The Jonesville archeological digs also uncovered the dramatic environmental changes that occurred as a
28 result of forest clearing by European settlers (Thomas et al. 1995). The alluvial terrace on the Huntington
29 River, which the Abenaki families occupied over 500 years ago, had developed slowly over thousands of
30 years with minimal flooding evident in the analysis of sediments. In contrast, during the 19th and early 20th
31 centuries, catastrophic flash flooding became more common as upland and riparian forests were cleared
32 for farming. Thomas (2007:9) noted that “between roughly 1810 and 1880, four to seven feet of sand,
33 gravel, and even small cobbles were deposited on the terrace surface.” These extraordinary floods covered
34 or destroyed most evidence of precontact use and settlements. More recently, as abandoned farmland
35 grew back to forest, flooding has declined. “Since the early decades of the twentieth century, less than
36 eight inches of alluvium have been deposited on the terrace surface next to the Huntington bridge, and
37 most of this was probably due to the great flood of 1927” (Thomas 2007:10).

1 **2.4.2. Plants and Animals of Special Cultural Importance for Western** 2 **Abenaki**

3 A number of forest species were and continue to be of special cultural importance to the Abenaki people,
4 and as such deserve special management consideration. Among tree species, these include black ash
5 (*Fraxinus nigra*, also called brown ash and *maalakws* in Abenaki) used for basketry, and white birch
6 (*Betula papyrifera*, also called canoe birch, its bark called *wigwa* in Abenaki) for canoes, homes, and
7 containers. Unfortunately, black ash populations are currently highly threatened by the emerald ash borer,
8 which is already present in Richmond. Butternut (*Juglans cinerea*, in Abenaki *pagon* or *bagon*) were
9 among the trees highly valued for food, medicines, materials, and dyes (Haviland and Power 1994;
10 Wiseman 1995b, 2001). This culturally important species is also threatened. The butternut canker fungus,
11 first found in Vermont in 1983, now infects nearly all butternut trees causing dieback and often death.
12 Maple sugaring (*Pkwamhadin* – “gathering of maple sap” (Chenevert 2021)) was an important seasonal
13 activity among the Western Abenaki, one which was taught to colonists (Cotnoir n.d.).

14 Thomas (et al. 1995:61-64) lists the uses by the Abenaki of some thirty species of trees and shrubs
15 abundant in the mixed deciduous forests of Vermont, many of which are found in ACF. Wiseman (1995a,
16 1995b, 2001) describes a wide range of forest plant species that were and are collected for construction
17 materials, food, medicines, and dyes by Abenaki people. In Appendix 2, Wiseman (2001) lists many
18 forest plants used in Abenaki herbal medicines by the maladies that they treat. A complete list of
19 culturally important species found now or in the past at ACF would be valuable to develop for use by the
20 ACFC in management decisions and educational materials. Ideally, such a list would be compiled, and
21 important species prioritized, in partnership with the Abenaki people.

22 Before colonization, the Abenaki likely hunted and trapped a wide range of animal species for food and
23 pelts in the forested landscape where ACF is now located. Thomas et al. (1995:65-75) describes the
24 traditional uses of the 11 species of animals found at the Huntington River site. Wiseman (2001)
25 describes the relationship and importance of many species to the Abenaki, as well as how they were
26 traditionally hunted and used. The acts of hunting and fishing, as well as the resulting food, skins and
27 other usable body parts (e.g., bones and sinew), remain culturally important for many Indigenous peoples.
28 As mentioned for forest flora above, it would be valuable to develop a prioritized list of ACF’s animal
29 species of cultural importance in consultation with Abenaki partners, including uses, stewardship, and
30 both Abenaki and scientific names.

31 **2.4.3. Abenaki language and the ACF**

32 The Western Abenaki language, which is in the Algonquian family of languages, is considered critically
33 endangered by UNESCO (2010). It is a descriptive language based on root words specifying physical
34 qualities. For example, the region’s largest river is named Winoskisibo – built from *Winos* means onion,
35 *ki* means land, and *sibo* means river. Thus the Winooski River is named for the ramps and other wild
36 onions which were known to grow in abundance along its shores. Maintaining the Abenaki language and
37 culture is deeply connected to the Abenaki homeland and its stewardship. For example, Cotnoir (n.d.), a
38 citizen of the Nulhegan Band of the Coosuk Abenaki Nation, wrote that “...sugaring still functions as a
39 time for our community members to gather and connect with the woods and one another. Through

1 sugaring, we continue to cultivate a working relationship with the land, while practicing our language –
2 Western Abenaki.”

3 Conservation efforts, such as the ACF, can inadvertently contribute to the erasure of Indigenous presence
4 when introducing and perpetuating nonnative place names and management practices. Conversely, the
5 ACF can support the revival of the Western Abenaki language and culture by supporting the use of
6 Abenaki language for places, practices, flora, and fauna in the naming of trails, educational materials, and
7 signage. **Appendix B** includes suggestions developed by the Richmond Racial Equity committee in
8 collaboration with Abenaki tribal citizens and culture keepers. If ACFC decides to go beyond that list,
9 Abenaki culture keepers should be consulted.

10 **2.4.4 History After European Settlement**

11 European settlers arrived in the Richmond area in the 1770’s. “Gray Rocks Farm,” as it was formerly
12 known, was placed on the National Register of Historic Places in 1996 “because of its dual architectural
13 and agricultural significance” (Longstreth 2007). The farm exemplifies the growth and development of
14 dairy farming in 19th and 20th century Vermont. The land that is now the Community Forest was largely
15 the farm’s pasture and woodlot, and most of the farmland and remains of the historic farm’s agricultural
16 buildings are on land now owned by Maple Wind Farm and protected by an agricultural conservation
17 easement The farm house and immediate yard are privately owned.

18
19 The existing forest parcel, along with 212 additional acres, was first farmed by James Butler, beginning
20 around 1800. He constructed a farmhouse, blacksmith shop, and an English barn before selling the
21 property to Asa Rhodes in 1813. The property remained in the Rhodes family for over a hundred years,
22 passing from father to son.

23
24 The 1850 agricultural census indicates that the Rhodes farm was primarily a dairy farm, with 45 cows
25 producing 1,800 lbs. of butter and 15,000 lbs. of cheese annually. As was common in Richmond at the
26 time, the farm also had other livestock – horses, chickens, sheep, and swine. The Rhodes also harvested
27 125 tons of hay and 200 lbs. of maple syrup annually and grew many different crops: corn, oats, rye,
28 potatoes, peas, and beans.

29
30 Over the years, ownership passed first to Asa’s son, Cornelius, and then to his son Edward, around the
31 turn of the century. The farm continued to grow and ultimately thrived as the market for butter and cheese
32 expanded. Given the farm’s success, in 1917, Edward reconstructed the English barn into a large U-
33 shaped barn that more than doubled the space available for the cows. The new barn also added space for
34 horses, a granary, and a milk house and he added a silo for storing cereals elsewhere on the property.

35
36 In 1923, Edward Rhodes sold the farm to Clarence Andrews. Andrews continued dairying operations on
37 the property until 1978. The Andrews also operated a successful inn, the Gray Rocks Inn, from 1928 to
38 1941. Ina Andrews, Clarence’s wife, ran the inn, cooking three meals a day for guests from
39 Massachusetts, New York, and Connecticut. During this period, the Richmond area was full of small inns
40 for travelers looking to experience the idyllic countryside. The tourism business was vital to the
41 Richmond economy and an important period in the town’s history.

1
2 *[BE: The text that starts at this point doesn't do justice to how Everett, Mary Jo and their daughters*
3 *owned, worked and cared for the land. Suggest the following.]* After Ken's death, Everett and his wife,
4 Mary Jo, ran the dairy farm on their own, and also sold firewood and hay from the property. They built a
5 rustic cabin on the northern portion as a deer camp which they used into the 1990s. Only the metal roof
6 and two 1950s automobiles remain.

7
8 Everett and Mary Jo raised four daughters on the land – Abigail, Amy, Jennifer and Kate. After
9 shutting down farming operations, the family generously facilitated the transfer and
10 conservation of the property. What had largely been the farm's timberland, pastures and places
11 of childhood exploration and adventures became Richmond's first community forest.

12
13 In 2018, Angus Cummings, a UVM student, interviewed several of the Andrews sisters and other
14 townspeople familiar with the recent history of the parcel for his [thesis](#). It includes historical photos of the
15 site contributed by the Andrews family.

16 **2.4.5 Remaining Historical Sites and Features**

17 Today, all that is left of the many farmstead buildings on the community forest parcel are two former
18 farmstead sites with stone foundations. One foundation is on the northwestern side of the property, near
19 the VAST trail. The other remaining foundations are near the end of the eastern farm road. One remaining
20 foundation, set slightly apart, was either a springhouse or a small barn. The adjacent parcel to the east,
21 was also part of Gray Rocks Farm and the Andrews Farmstead. The 1813 farmhouse and barn remain
22 there, just outside of the town-owned forest property. In 2013 Maple Wind Farm bought 189 acres from
23 the Andrews family largely below Route 2, which is conserved by an agricultural use easement On
24 January 13th, 2014 the barn located across the street from the ACF entrance, burned down from an
25 electrical fire. Maple Wind Farm rebuilt the barn in the same location in 2014.

26

27 **2.5 Ecological Resources (Brad + Sam – see new section in “MP2 Eco with** 28 **Appendix 1-22.pdf”)**

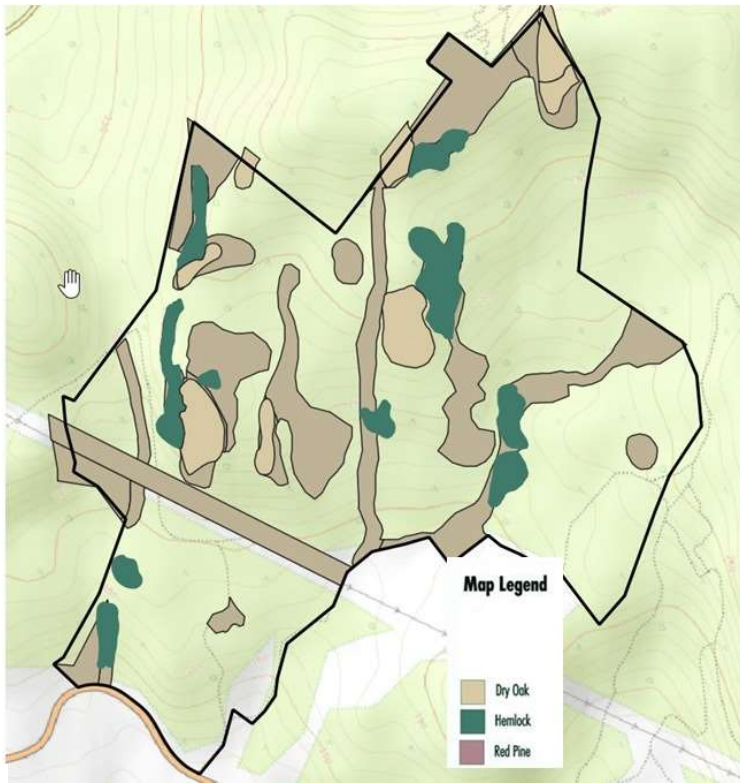

29 *[IS Comment: Note this section 2.5 and its subsections are recommended by Brad and Sam to be*
30 *replaced by text in “MP2 Eco with Appendix 1-22.pdf”]*

31

32 **2.6. Water Resources (Melissa + Brad – see new section in “MP2 Eco with** 33 **Appendix 1-22.pdf”)**

34 *[IS Comment: Note this section 2.6 and its subsections are recommended by Brad, Sam and Melissa to*
35 *be replaced by text in “MP2 Eco with Appendix 1-22.pdf”]*

2.7. Forestry (Brandon)

Historical records indicate that former owners actively managed the forest. In 2011 - 2014, timber management occurred on a western portion of the property. Western areas were previously logged in 2001-2003 and eastern areas were logged in 1994-1997. The most recent timber harvest was completed in the spring of 2021 under the direction of then Chittenden County Forester, Ethan Tapper.

There are a number of reasons to continue to employ active forest management on the Andrews Community Forest. Active forest management can be an important part of land restoration, conservation, maintaining the ecological integrity of native ecosystems, retaining the working landscape of Vermont, and supporting the local forest products economy in

Vermont. Outside of infestations of non-native invasive plants, forests do not require human intervention to self-perpetuate and function ecologically. Active forest management, though, can accelerate the process by which forests acquire characteristics we may find desirable, such as:

- Healthy wildlife habitat
- Old forest characteristics
- Resilience to disturbances (climate change, invasive pests, etc)
- Carbon storage and/or sequestration
- A steady supply of forest products

Active management in the form of timber harvesting can meet the goals of creating the forest products we use while promoting the other attributes as well. The forest products industry, in addition to being economically important in Vermont, can support the maintenance of healthy, intact ecosystems by providing the means for enhancing wildlife habitat, elevating the health and resilience of forested ecosystems, and generating periodic income to fund important stewardship activities. It is also a source of local, renewable resources in the form of forest products.

Forests, such as ACF, can sustain plant and wildlife species of special cultural importance to Abenaki peoples. Forest management for timber on municipal lands can serve as a demonstration of responsible and sustainable forest management, educating people on how to harvest forest resources in a sustainable way. If forest management incorporates traditional practices by engaging Abenaki foresters and culture

1 keepers, it offers the opportunity to demonstrate historical and contemporary Indigenous forest
2 stewardship practices.

3
4 Uneven aged silvicultural systems (single and group tree selection) will generally mimic the scale,
5 intensity, and frequency of disturbance that the forests of Vermont historically received prior to European
6 settlement. With these systems either single, scattered trees or groups of trees (up to about 2 acres) are
7 removed in a single treatment. These mimic historical disturbances such as windthrow, ice damage, or
8 large downburst events. In forest management choices of which trees to retain and which to harvest are
9 guided by a combination of ecological principles (which tree is “healthier,” which trees are in use, or may
10 be used, by wildlife), and human desires (the management objectives). Economic considerations (which
11 tree is a more valuable species or may produce a more valuable product in the future) may contradict the
12 'non-commercial' stipulation in the Easement. Trees in forests, without any intervention by humans, will
13 naturally die due to old age, disease, or disturbance. Active forest management seeks to guide which trees
14 continue to occupy the forest and which will succumb to mortality; thus accelerating the accumulation of
15 desirable forest characteristics (for example increased carbon storage or wildlife habitat).

17 The ability of a forest to respond to and maintain its health during disturbance is known as resiliency.
18 Simple forests lack a diversity of tree species or structure, because of this they have fewer pathways to
19 recovery if a disturbance occurs. Complex forests, those with greater species diversity or increased
20 structural complexity, have more pathways to recovery following disturbance, and are therefore more
21 resilient. Forests today encounter regular natural disturbance events, together with human-related events.
22 In the face of an unstable climate, invasive exotic plants, animals and pathogens, and many other
23 unpredictable problems, it is prudent to manage forests for resiliency in the course of any long-term forest
24 management planning. Our goal is to encourage diversity, both in terms of species composition and
25 function, the age spectrum of significant species and consistent with other activities within the
26 management plan. Uneven aged silvicultural systems will accomplish the goal of encouraging complexity
27 of the forest, and therefore the forest’s resiliency.

1
2 **2.9. Recreation (Chase + Jim)**
3

4 When the Forest was owned by the Andrews family, it was not posted and allowed hunting, walking,
5 snowshoeing, and skiing. It was also managed for timber, leaving logging roads scattered throughout the
6 property. *[BE: The conclusion of the sentence isn't supported by the beginning. See suggestions.]* Some of
7 these roads are unsuitable for increased recreational use due to their steep grades, poor drainage, and
8 potential for erosion. Others could be lightly maintained for continuing use as footpaths, supplementing
9 multi- and single-use trails in appropriate areas. Other roads (the VELCO road, the Maple Wind Farm
10 road on the eastern boundary, and parts of the former VAST trail) act as important recreational and
11 management corridors throughout the property and remain in use.
12

13 Now, new trails and a parking area have opened up the forest to many more people and activities. Recent
14 years have brought major changes to both the nature and the volume of traffic on forested trails. For
15 example, new mountain bike technologies such as lighter frames, e-bikes and wintertime tires are taking
16 more people further into forests in less time and in different times of the year. There are over 100 miles of
17 trails for use with mountain bikes within Richmond and bordering Towns (Table 4). Regional networks
18 are in discussion or under construction, making once-remote areas accessible to village, town and city
19 population centers, potentially increasing traffic and requirements for volunteer management. [CR

20 *Comment: 2nd paragraph and table not appropriate....subjective view on perceived harm of mountain*
21 *biking....table could be useful if not used to argue that trails are not needed. (and bikes have been getting*
22 *heavy for several years)]*

23 *[BE: I don't see anything about "harm" in the paragraph. But our decisions need to account for the*
24 *dramatic increases in trail traffic and volume, and thus on impacts. And assessing need is part of figuring*
25 *out the benefit side of the cost/benefit equation. However – though valid to our discussions, I don't think*
26 *the MP needs to include the table, or for that matter, laboriously justify its stipulations. It should be*
27 *enough just to include a requirement somewhere that trail and infrastructure proposals address needs and*
28 *costs alike.]*

Table 4: Multi-Use Trails in Richmond and Surrounding Towns

The VYCC campus, which adjoins the property to the east, has a network of trails. There is currently a former VAST trail connecting the two properties and trail networks. **Rules of use at VYCC?** [IS Comment: I met with Breck Knauff to ask about that, and made notes]

Adjoining the ACF to the north is a 173-acre property currently owned by David Sunshine and Carol Jordan, which contains a multi-use trail network connecting to trails on adjoining properties and beyond. A meeting of David Sunshine and Ian Stokes on August 21st 2023, identified that the land is conserved and VLT did a survey and holds the Easement. Motorized travel is not permitted and there is no parking at the trailhead. Hunting is only with permission, and there are no limitations about time of day/night or seasonal access. Dogs are permitted subject to removal of dog waste from trails. Trail closures are monitored by RMT but the trails are not listed at the Richmond Trails map, nor mentioned at the Town webpage. [CR Comment: My understanding is that trails on conserved private land are generally not listed on town maps / website.] There is informal(?) [CR Comment: Trails connect formally to the intersection of Fitzimmons Rd. and Browns Trace.] connectivity from these trails to the north, eventually to the Mobbs trails in Jericho.

2.10. Agriculture (Wright)

Maple Wind Farm, the adjoining landowner to the south and east, is a diversified pasture-based livestock, poultry, and organic vegetable farm. In 2013, the farm acquired 187 acres of former Andrews/Gray Rocks Farm. This farm had an informal agreement with the Andrews family to use two fenced in meadow areas for livestock grazing. Many years ago Maple Wind Farm had placed high tensile electric fencing around their grazing area in the community forest’s lower meadow and upper meadow. A human gate through the fence allows for public access to the meadow when the pasture is not in use for grazing. When the pasture is in use, the “cutover trail” is closed.

The “lower meadow” and the “upper meadow” under the power lines, used to have about 30 adult bovines and 30 calves for 10-16 days per year. se fenced in meadow lands have not been used for grazing or any agricultural purpose since perhaps 2010. The ACF Committee did have conversations with Maple Wind Farm perhaps in perhaps 2018 about entering into a license agreement at nominal charge for agricultural use of the two fenced meadows. Those conversations ended without final terms established. The Committee would like Maple Wind to continue these conversations and consider finalizing the agricultural license agreement.

Maple Wind Farm has a 25’ right-of-way for agricultural purposes over the old farm road on the eastern side of the Andrews Community Forest extending from the then Dyer-Chadwick property on Route 2 to

1 Maple Wind Farm’s upper meadow. The Town has a 25’ right of way over the northern edge of Maple
2 Wind Farm’s upper meadow over what was previously the VAST trail.

3
4 *[BE: In the section below, “Legal Agreements,” might we also include the earlier text about the*
5 *Conservation Easement, which also puts legal requirements on us, and for the entire property? Also note*
6 *that this appears at the end as well]*

7 **2.11. Legal Agreements on the Property (Wright updates)**

8 There are four recorded easement agreements as follows:
9 the east / west 150’ wide VELCO (Vermont Transco, LLC) utility easement,
10 the adjoining to the north and parallel 100’ to 125’ wide east / west Green Mountain Power, Co. utility
11 easement,
12 the Maple Wind Farm, 25’ farm road right of way on the eastern side of the Andrews Community Forest,
13 and the Vermont Land Trust conservation easement.
14 A fifth easement, which has been fully agreed to and will likely be recorded in early 2025, is the VELCO,
15 surveyed, 25’, utility road right of way easement, leading from US Rte. 2 heading north up the existing
16 utility road to the two utility right of way easements. Approval by Vermont Land Trust and the
17 Selectboard is required for any changes in easement agreements.

18 **2.11.1 Agricultural Lease (Wright updates)**

19 Maple Wind Farm is an adjoining landowner of several hundred acres of the original Andrew farm.
20 Maple Wind Farm has historically used eight to twelve acres of what is now the Community Forest for
21 grazing cattle. The fenced in lower meadow and fenced upper meadows have not had cattle on them
22 since perhaps 2015. The committee is interested in continuing to have Maple Wind Farm use these
23 meadows and will explore the possibility of a long-term license agreement. These meadows should be
24 brush hogged so trees and brush don’t over take them.
25 .

26 **2.11.2 Powerline Rights-of-Way: VELCO (Wright updates)**

27 A VELCO powerline runs east/west through the community forest subject to a 150’ wide utility easement.
28 VELCO, the committee, the Town Manager, the Selectboard and the Vermont Land Trust have been
29 working collaboratively to provide VELCO with its desired ’25 wide perpetual utility road Right of Way
30 easement, over the existing utility road. In 2018, VELCO improved a road from the forest entrance on
31 Route 2 to the powerline; they used the upper landing area to stage their work. Following this work, they
32 re-seeded the landing and the road above the landing and installed waterbars on the road below the
33 landing. At certain periods, VELCO may need to close some of the forest to perform larger projects on
34 the powerline. The ACF Committee should coordinate with VELCO to prepare for such events and fully
35 inform the public of the closure.

1 **2.11.3 Powerline Rights-of-Way: Green Mountain Power (Wright updates)**

2 Green Mountain Power has a 75’ to 100’ utility right-of-way adjacent north of the VELCO utility line in
3 the same east / west powerline corridor.
4 Within each of these two utility corridors, VELCO and Green Mountain Power manages vegetation
5 growth. The Committee will work to better understand the vegetation management goals and practices,
6 the landowner’s (Town’s) rights, to advise the Selectboard to make an informed decision about vegetation
7 management within the Powerline corridor, and to communicate this decision broadly to Community
8 Forest visitors.

9 **2.11.4 (new)**

10 A fifth easement, which has been fully agreed to and will likely be recorded in early 2025, is the VELCO,
11 surveyed, 25’, utility road right of way, leading from US Rte. 2 heading north up the existing utility road
12 to the two utility right of way easements.
13 Approval by Vermont Land Trust and the Selectboard is required for any changes in easement
14 agreements.
15 [BE: This is only of very limited interest to people and at most could be dealt with in the Appendix or
16 even a separate, historical document for Town archives.. It also omits the expert panel discussion on how
17 trails and wildlife can co-exist, the consultation with Fish & Wildlife’s Andrea Shortsleeve, and the
18 survey and consultation with botanists Liz Thompson (who first spotted the broad-beech ferns in a
19 flagged route). Whether we list these people should depend on whether we follow their
20 recommendations.]

21 **3. Management Plan Development and General Principles**

22 **3.1 Management Plan Development**

23 Upon purchasing the property, the Selectboard established an Interim Community Forest Steering
24 Committee to develop a Comprehensive Management Plan and governance structure for the Community
25 Forest, subject to final approval by the Selectboard. This Committee prepared an Interim Management
26 Plan to provide short-term guidelines for the management of the property and allow “breathing room” for
27 the development of the Comprehensive Management Plan. The [2018 Management Plan](#) was signed by the
28 Town and approved by the Vermont Land Trust in March 2018.

29
30 Meanwhile, the Town, through a grant from the Vermont Urban and Community Forestry Program,
31 worked to develop the full Management Plan with the consulting groups SE Group and Arrowwood
32 Environmental. Beginning in 2018, these groups assisted in management planning by leading the public
33 input process, conducting environmental analyses, and drafting the plan. The first Management Plan was
34 adopted by the Selectboard in November 2018 in compliance with conditions attached to a grant from the
35 US Forest Service.

36

18 Sinuosity)

19 July 2021: Arrowwood and Sinuosity consultants (Aaron Worthley, Dori Barton, Mariah Keagy, Brooke
20 Scatchard)

21 June 2022: Arrowwood and Sinuosity (Dori Barton and Mariah Keagy)

22 July 2022: Discussion with Arrowwood (Aaron Worthley) about the fine-scale review.

23 August 2022: Consultation with Melissa Levy (Community Roots, LLC) about facilitation of a
24 community engagement public meeting.

25 August 2022: [Advice from Nick Fortin](#) (Deer & Moose Project Leader, Department of Fish & Wildlife,
26 Vermont Agency of Natural Resources) email to ACFC about deer wintering areas and recreational use.

27 January 2022: Rebecca Roman (Vermont Land Trust) about acknowledgment wording and use rights as
28 related to the Conservation Easement)

29 January 2022: Chief Richard Menard of Missisquoi Abenaki Nation about perspectives on the Land
30 Acknowledgment and related components

31 July 2022: Rebecca Rouiller (Radiate Art Space, which sponsored the murals of Abenaki culture and
32 language on the Town Center building) agreed to allow use of mural images in ACF signage. The murals,
33 which were dedicated in a traditional ceremony led by Abenaki culture bearer Charles Delaney Megeso.

34 March 2023: Richmond Conservation Commission panel discussion on balancing conservation and trail-
35 based recreation. [Video by MMCTV](#)

36 June 2023: Talk “Enjoying Our Trails with Wildlife in Mind”: Sue Morse of “Keeping Track” Video by
37 MMCTV <https://archive.org/details/sue-morse-enjoying-trails-wildlife-06072023>

38 November 2024: Tyler Machia (Richmond Zoning Administrator) presented information to ACFC
39 meeting [about Zoning Regulations and trail construction](#).

41 *[BE: Rules would best be published where they'll be easier to change. The MP is too long-lived for any*
42 *list to avoid becoming obsolete, especially with us relatively new to the job and learning which rules*
43 *work, which don't and which we need to add. We can have a requirement somewhere to keep rules posted*
44 *on the ACFC web page and on the kiosk and other entrances to the ACF.*

1 **3.2 General Rules**

- 2 ● Except where otherwise noted in the plan (seasonal trail closures in certain areas to
3 protect foraging, reproduction and winter shelter etc. of at-risk species, hunting), the ACF
4 is open year-round to the public from dawn to dusk. Other exceptions with prior
5 approval of the ACFC. Any human presence is known to disrupt activity of nocturnal
6 wildlife. (e.g. See [https://www.nationalgeographic.com/science/article/news-humans-](https://www.nationalgeographic.com/science/article/news-humans-making-mammals-nocturnal-behavior-ecology)
7 [making-mammals-nocturnal-behavior-ecology](https://www.nationalgeographic.com/science/article/news-humans-making-mammals-nocturnal-behavior-ecology))
- 8 ● As the Original People who stewarded these lands, the Western Abenaki People and other
9 Indigenous Peoples are extended a special invitation to visit the ACF and pursue
10 traditional and contemporary practices as outlined in **Appendix B, Indigenous**
11 **Achnowledgement, Part 2.**
- 12 ● **Allowed Uses:**
 - 13 ○ Dispersed and trail-based pedestrian access is allowed on the property for uses such as
14 hiking, walking, wildlife observation, or cross-country skiing, unless otherwise noted.
 - 15 ○ Mountain biking is only allowed on trails designated for that use and at designated times.
 - 16 ○ Snowmobiling may only be used on designated trails subject to agreements with VAST.
 - 17 ○ Hunting is allowed on the Andrews Community Forest and is subject to the State of
18 Vermont hunting seasons, rules, and regulations.
 - 19 ■ Temporary tree stands and ground blinds are allowed: from the third Sunday in
20 August through the third Saturday in December, May 1 through May 31, and
21 during any Youth Hunting Day. Tree stands and ground blinds must be erected
22 such that no damage is done to a living tree (except that branches <1” diameter
23 on the main stem may be trimmed). Stands and blinds must have the owner's
24 name and contact information in an easily identifiable location. Stands and blinds
25 that do not conform to these regulations may be confiscated.
 - 26 ○ The Abenaki People may use ACF for gatherings and ceremonies, including the erection
27 of small, temporary structures relevant to ceremonies. Prior notification of the ACFC is
28 requested for large gatherings.
 - 29 ○ The Abenaki People have the right to collect fungi, plants, and plant parts in a sustainable
30 manner, which is described in **Appendix B, Indigenous acknowledgement.**
 - 31 ○ Additional uses not listed here may be considered by the ACF Committee if they comply
32 with town and state law and the Conservation Easement.

33 **3.3 Restricted and Prohibited Uses, as specified in the Conservation Easement**

- 34 ● **Restricted Uses:**
 - 35 ○ Motorized vehicles are not allowed on the property, except for use by those with physical
36 disabilities (**as defined in ADA?**), snowmobiles on any approved VAST trail, vehicles
37 required for property management, or in case of emergency. Use for winter maintenance
38 such as 'grooming' of trails **shall be limited twice per year** to minimize disturbances
39 during the winter when wildlife is at risk.
 - 40 ○ Road Use: Motorized vehicles will be permitted subject to the easements with VELCO
41 and the right-of-way agreement with Maple Wind Farm.
 - 42 ○ Commercial wildcrafting, the collection of mushrooms, berries, herbs, and other forest
43 materials for sale, is restricted to Abenaki People who follow the sustainable practices

described in Appendix B. ? Other non-commercial wildcrafting - (mushrooms, chaga, ramps, birch bark, etc.)?

● **Prohibited Uses:**

- Campfires
- Overnight parking
- Horseback riding
- Camping
- New trail development without prior approval of the ACFC.
- Timber harvest outside of the approved Forest Management Plan.
- Trapping. Trapping poses a safety hazard to visitors and their pets and is considered incompatible with recreational and educational off-trail hiking by residents, school groups, researchers and hunters. Exceptions may be granted by the ACFC in conjunction with the Vermont Land Trust to address animals of concern/natural resource management concerns. Signage will notify visitors of the trap location and purpose.

3.4 Posting of Town Forest Rules

Posted rules shall be posted at the kiosk and trails providing access from neighboring lands (Note to ACFC: need to update the posted rules and install):

1. The Forest is open from dawn until dusk for walking, running, skiing, and other non-mechanized recreation. Hunting is permitted thirty minutes before sunrise and thirty minutes after sunset in accordance with VT State regulations §4745. [Insertion by SP]
2. ATVs, motorcycles and other types of motorized transport are not permitted. Be aware that the neighboring farm operation may use farm vehicles to access its pastures.
3. Bikes only on authorized trails (see the map) and yield to others. [SP Comment: I think we should add signage per trail stating allowed uses as well.]
4. During hunting seasons (generally October through May) - please use safety colors.
5. Please park only in the assigned lot and not on the adjacent private property or across Rt. 2. Respect the privacy of the neighboring homes and businesses.
6. Keep pets on a leash; dogs are not permitted above the power lines. [SP Comment: I generally agree this is the responsible thing to do, but I would offer that we make a slight adjustment— changing it from power line to VAST trail. It only slightly changed the allowed trails for dogs, and also allows for better connectivity to surrounding properties for dog owners without having a major impact on wildlife.] Avoid disturbing wildlife or livestock. Remove all pet waste.
7. Be careful of the pasture fencing - it may be electrified.
8. Camping and fires are not allowed.
9. Do not cut, remove or damage any trees or other vegetation. [SP Comment: This seems to broad as it would not allow for foraging things like ramps, nettle, etc]
10. Watch out for ticks!

3.5 Parking

Parking is available off of Route 2 across from Maple Wind Farm, at 1129 East Main Street, Richmond and is permitted to accommodate one parked school bus and five parked cars. The Town of Richmond is

1 responsible for maintenance and plowing. The upper landing area can be used for parking during special
2 events, subject to acceptance of an application to the ACFC.

3 No new car parking shall be designated without ACFC approval. Maintaining low parking capacity is a
4 passive way of controlling density of use.

5 Bike parking shall be installed in the parking area.

6

7 *[BE: Below (3.6 and 3.7) -- More history and feel-good text that can go elsewhere. It has a promotional,
8 even self-aggrandizing ring to it. It makes it seem like the ACFC puts image-polishing ahead of
9 presenting a solid MP].*

10 **3.6. History of the Management Plan Public Input Process**

11 Public input opportunities into the initial management planning process in 2017 and 2018 were advertised
12 by email, social media, Front Porch Forum, via signage in Town, and in the local print newspaper, the
13 TimesInk! This process was critical to ensure the Management Plan reflects the interests of Richmond
14 residents, and to give the Committee an opportunity to consider and reach consensus on important
15 management issues such as hunting, trail development, and more.

16

17 Results from the public input process are available on the [Town of Richmond website](#) (where? In the
18 MP?) and participation is summarized below:

19

- In response to an online survey about whether the Town of Richmond should purchase the Andrews Forestland as a community forest, wildlife habitat protection was the most (?confirm) listed interest of respondents related to the opportunity.

20

- *Visioning Workshop* – A public workshop was held on January 18, 2018 with about 80 community members in attendance, providing input on management balance, appropriate activities and facilities

22

- *Visioning Survey* – A survey, open from January to March 2018, asked similar questions to those posed at the workshop. The survey received 317 responses from residents of Richmond and surrounding towns.

26

- *Stakeholder Interviews* – Small group interviews were held on June 14 and June 18, 2018 to discuss the future of the property with stakeholder groups: hunters/trappers, neighbors, education, trail-based recreation, natural resources, and others were invited to join.

29

- *Draft Strategies Workshop* – A public workshop was held on July 12, 2018 to present the progress of the plan and hear feedback from the community on draft strategies for the future development and management of the property.

32

- *Community Forest Committee* – The Community Forest Committee met twice a month through this process. The committee also met as smaller working groups to inventory and plan for each resource in the property.

35

- *Public Input on Draft Management Plans* -- 44 people attended a presentation of the 1st draft of the Management Plan on 9/20/18; an additional 14 people submitted comments in writing. The comment period was open for two weeks. A second draft plan was released on 10/21/18, followed by a two-week comment period and including another public meeting.

38

39 Formal Public input into the 2022 Management Plan revision, including public engagement regarding the
40 development of the approved trail design and the inclusion of an Indigenous land use acknowledgment,
41

1 occurred in 2020-2022. In addition to the monthly ACFC carried out the following specific public
2 engagements:

- 3 ● September 2020: After consultation the ACFC developed an RFP for ecological review and trail
4 design services requiring the ecologist and trail designer to collaboratively establish a proposed
5 trail design
- 6 ● May 2021: Public walk held at ACF with Arrowwood and Sinuosity (professional ecologist/trail
7 build team) to walk part of the proposed trail and discuss routing
- 8 ● June 2021: Public presentation by Arrowwood and Sinuosity of proposed design, including
9 representatives from VLT and SB. Some members of the public raised concerns over proposed
10 encroachments on sensitive wildlife habitat and natural communities.
- 11 ● March 2022: Online public comments form launched seeking feedback on ACFC’s preliminary
12 trail Plan. 128 public comments received on proposed trail design. ACFC thematically coded
13 comments into 25 emergent themes/concerns. Some of the submitted suggested changes and
14 submitted via other forums (e.g., Front Porch Forum, the Times Ink) were specific and
15 accompanied by clear rationale.
 - 16 ○ [Comments submitted via form](#)
 - 17 ○ [The comments here in ‘readable’ form](#) and organized by category.
 - 18 ○ [Public comments related to proposed trail route and committee responses](#)
- 19 ● March 2023: Professionally facilitated public meeting to solicit feedback related to proposed
20 Management Plan revision
 - 21 ○ [Questions presented for experts at the March 29th 2023 ‘Public Engagement’ meeting](#)
 - 22 ○ [Video recording](#) of Public Engagement meeting.
 - 23 Transcript (per YouTube) [here](#) with speakers identified, and edited for clarity; and partial timeline
 - 24 [here](#)
 - 25 ○ [Facilitator report](#) – Comments after “Public Engagement” meeting.
 - 26 ○ [Summary of Facilitator Report](#)

27
28 *[The next section is redundant with much of 3.1]*

29 **3.7. Expert Guidance Provided to the ACF Committee**

30 **Alignment with town plan/zoning regulations**

31 Keith Osborne (Town Planner) advised that when there is a plan for new trails, etc. ACFC should contact
32 Richmond Planning and Zoning and DRB to ensure the regulations are followed.

33 **Development addressed in the town plan:**

34 The Town plan states: “Restrict development on steep slopes between 20% and 35%, cliffs, and ridgelines
35 over 900ft in elevation, [SP Comment: Per the zoning administrator, the 900ft rule doesn’t apply to trail
36 development in ACF] and prohibit all structural development (including renewable energy generation
37 facilities and distribution/transmission infrastructure) on slopes greater than 35% , in order to maintain
38 habitat connectors and mitigate erosion”

39 **Zoning**

40 The ACF is zoned as a recreational facility, based on a June 10 2020 DRB decision about the parking at
41 the East Main frontage.

1 Zoning Administrator Tyler Machia has advised that any development in the ACF requires DRB
2 approval: Concerning trails, any new trails developed on slopes greater than 20% will require engineered
3 plans for “adequate” erosion controls per the RZR, SECTION 6.11. Trails that currently exist can be
4 maintained in-situ but any changes that would be considered an update to the approved site plan would
5 require DRB approval. See [Tyler Machia memo](#) for Nov 25th 2024 [IS Comment: Also his updated
6 [memo of Dec 13th 2024](#)] meeting and ACFC Minutes October 23rd, 2023: and the Town's [Zoning](#)
7 [Regulations](#) especially Section 2.5.1 Areas with Special Guidelines for Land Development.

8
9 **Other Expert advice:**

10 Trail designers Aaron Worthley, Dori Barton of Arrowwood and Mariah Keagy of Sinuosity about the
11 proposed trail routes and removing the Ridgetop Trail based on public feedback, and about the fine-scale
12 ecological review.

13 Consultation with Community Roots, LLC (Melissa Levy) about facilitation of a public meeting on
14 revisions to the Comprehensive Management Plan.

15 Nick Fortin (Deer & Moose Project Leader, Department of Fish & Wildlife, Vermont ANR) about how to
16 manage deer wintering areas in the context of recreational use. ([Correspondence with Nick Fortin](#))

17 Rebecca Roman (VLT) regarding development of trail design, revising the management plan, and general
18 compliance with the Conservation Easement.

19 [Josh Arneson](#), (Richmond Town Manager) [Judy Rosovsky](#), (Conservation Commission) [Willie Lee](#) and
20 [Chase Rosenberg](#) (Trails Committee) [SP Comment: Other experts listed show how they contributed their
21 [advice— can we provide context for these resources as well?](#)]

22
23 **For the development of the Land Acknowledgment**, the accompanying use rights, and the signage and
24 naming suggestions:

25 Scott Silverstein and Alexis Latham (Richmond Racial Equity) and Jesse Bruchac and Kerry Wood, (tribal
26 citizens), Chief Don Stevens (Nulhegan Band of the Coosak Abenaki Nation), Chief Richard Menard
27 (Missisquoi Abenaki Nation), Abenaki culture bearer Charles Delaney Megeso and culture keeper
28 Annette Urbschat concerning Abenaki access to the forest for hunting, gathering and perhaps holding
29 gatherings, as well as the potential trail naming and interpretive signage (See Appendix B).

30 Rebecca Roman (VLT) reviewed the Land Acknowledgment wording and use rights as related to the
31 Conservation Easement and Rebecca Rouiller of Radiate Art Space, which sponsored the murals of
32 Abenaki culture and language on the Town Center building, agreed to allow use of mural images in ACF
33 signage.

34
35 *[We have yet to present management objectives or action items, and we're describing how they'll be*
36 *changed? It sort of knocks the legs out from under them. This material belongs in the MP but would be*
37 *most logical to include at the end.]*

38 **3.8. Comprehensive Management Plan: Process for Updates: Amendments**
39 **and Revisions**

40 This Comprehensive Management Plan is intended to be a living and evolving document. As the Andrews
41 Community Forest is new to public ownership, there is a need to better understand conditions on the
42 ground and respond to new conditions that may arise. Adaptive management is an iterative cycle of
43 evaluating and learning, adjusting, planning, and acting. The ACFC is required to make management

1 decisions based on resource management objectives and current best management practices. [BE: The
2 preceding sentence should read, "...resource management requirements and objectives, ..." In addition,
3 the ACFC is required to gather information on relevant management practices that can guide future
4 management decisions and management plan revisions.

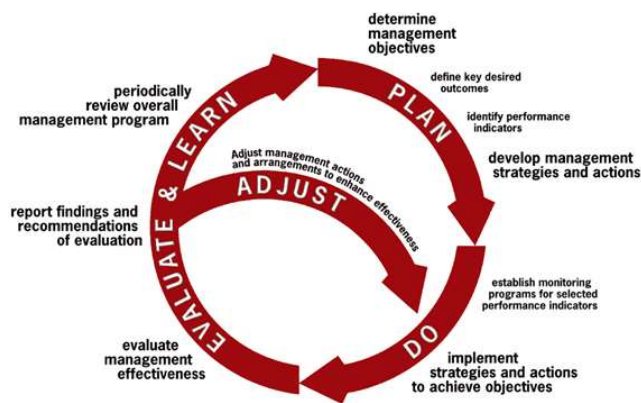

5
6 [BE: In the sentence below, our "early years" have passed. Our understanding of it will evolve as well,
7 along with our uses] This plan must be reviewed and updated, at a minimum, every ten years, as required
8 by the Conservation Easement. However, more frequent revisions may be necessary as the community's
9 uses of the property and knowledge about it evolve. Updates to the Comprehensive Management Plan can
10 be of two kinds, revisions or amendments, which vary in degree of public outreach and data collection.

11
12 [BE: Suggestion below] Any amendments to the plan, as suggested by Figure 3: Adaptive Management
13 Model, may include **minor adjustments** made in the public eye that improve the effectiveness of
14 management actions or minor changes to wording.

15 Any **major changes** to the plan objectives or proposed actions require a plan revision, which entails a
16 planning and outreach process that includes scoping of concerns, collection of any needed data, and a
17 public engagement process that invites stakeholders and other residents to provide input on proposed
18 revisions. Such a process may entail a combination of surveys, ecological assessments, field trips, and
19 public meetings dedicated to the plan revision.

20
21 Proposed changes to the Comprehensive Management Plan, either amendments or revisions, must be
22 reviewed and approved by the Vermont Land Trust to ensure compliance with the Conservation Easement
23 and submitted for approval by the Richmond Selectboard.

24 25 Figure 3. Adaptive Management Model

27 28 29 4. Timber Management and Forestry Activities (Brandon)

30 In November of 2019 the ACFC, Vermont Land Trust, and the Selectboard adopted a [Forest Management](#)
31 [Plan](#) written by the County Forester Ethan Tapper specific to forestry activities. The document details
32 how the forest will be managed for its timber and other natural resources. It uses a 'zone' approach that

1 divides the forest into three different management styles for perpetuity and emphasizes a diverse and
2 resilient forest as well as addresses invasive species management. This Comprehensive Management Plan
3 provides more detail about the Forest Management Plan that was crafted by Ethan Tapper and adopted by
4 the Selectboard on November 18, 2019. Additional timber stand improvement (TSI) activities were
5 completed in the winter of 2022 and included crop tree release as well as selective cutting.

6
7 Many forest management roads (also called “logging roads,” or “skid trails”) from previous logging
8 operations still exist in the forest. Some may still serve as a component of a multi-use recreational trail
9 network, provided that drainage and erosion challenges can be mitigated. The use of these trails for
10 recreation should not compromise or preclude their utility as forest management roads into the future.

11
12 This Forest Management Plan provides an initial schedule for maintenance and on-going forest
13 management activities by stand and zone. All forestry activities should be in agreement with this
14 document. (Located on the town website; click [here](#) for direct access).

15 [Did Brandon See this, or confine his update to the earlier Forestry section? Seems odd that he’s changed
16 nothing, like “Consider creating 5-10 acres of young forest/early-succesional habitat,” as we’re long past
17 considering that.. Suggestions and highlights following “Overall Objectives:” just below are mine.

18 4.1 Forestry Management Objectives and Actions

19 **Overall Objectives:** Follow the [Forest Management Plan](#) adopted on [redacted] to manage forestry
20 activities that improve forest health, wildlife habitat protection and wildlife diversity.

- 21
- 22 • Utilize multi-aged silvicultural treatments over the majority of the property.
- 23 • Avoid creating new permanent openings or wide (> 20 feet wide), roads and trails. **Consider**
24 **creating** 5-10 acres of young forest/early-succesional habitat.
- 25 • Utilize management guidelines that enhance the value of the forest for a variety of deep forest
26 species such as bear, fisher, and a variety of songbirds is recommended.
- 27 • In Ledge, Talus, and Ridges area, a forested canopy should be maintained over these rock habitats
28 that occur in a forested matrix. The selective removal of trees near these habitats is compatible
29 with continued use by wildlife. Maintain a 100’ buffer from treatments to broken ledge and talus
30 that provide concealment cover for wildlife.
- 31 • Mast Stands: Use forest management activities that promote the establishment, maintenance, and
32 persistence of these species within the Forest.

33
34 **Objective 2.** Protect natural communities as well as the ecological processes that sustain them. Retain
35 soil integrity, water quality, natural species composition, natural disturbance regimes and natural
36 hydrology.

- 37 • Update natural community mapping as more on-the-ground data becomes available.
- 38 • All forestry activities shall incorporate steps to retain soil integrity, water quality, natural species
39 composition, natural disturbance regimes, and natural hydrology; Identify and control exotic
40 species with the Forest Management Plan.
- 41 • Deer Wintering Areas: The Hemlock and Hemlock-Northern Hardwood forest communities on
42 the parcel could be managed specifically to enhance the conifer overstory and hemlock
43 regeneration.

1
2 **Objective 3.** Recognize that forest management in the form of the periodic harvesting of timber is an
3 important part of land conservation, maintaining the working landscape, and supporting the forest
4 products economy in Vermont.

- 5 • Employ forest management for timber on municipal lands as a demonstration of responsible, and
6 sustainable forest management, educating residents of Richmond and beyond in how to harvest
7 forest resources in a sustainable way. See Forest Management Plan for harvest dates.
- 8 • Hold educational events around forest management activities to inform the public about the
9 rationale and best practices of sustainable forest management.

10
11 **Objective 4.** Manage the ACF to sustain plant and wildlife species of special cultural importance to
12 Abenaki peoples. (When forest management incorporates traditional practices by engaging Abenaki
13 foresters and culture keepers, it offers the opportunity to educate the community about historical and
14 contemporary Indigenous forest stewardship practices.)

- 15 • Maintain contact with Abenaki tribal foresters to contribute to future forest management planning
16 and activities. In collaboration with Abenaki partners, identify culturally important species (e.g.,
17 black ash) and the stewardship practices needed to sustain them, to inform future forest
18 management activities.

20 **5. Cultural History Management Objectives and Actions (Cecilia)**

21 In our commitment to Abenaki indigenous, first nation people we have pledged to foster a healthy forest
22 community by incorporating Traditional Ecological Knowledge into our management practices.

23 **Objective:** Provide information for forest visitors about the Indigenous and colonial cultural history of
24 the forest and its context within Richmond.

25 Expand and enhance cultural information about the forest.

26 Add interpretive signage about the cultural history of this forest land at historic sites and about
27 other educational materials that explain and celebrate Abenaki language, forest uses and stewardship
28 practices.

29 Work with the Abenaki tribes, the Andrews family, and others with cultural knowledge of the
30 forest to host programs and tours about the history and contemporary resources of the ACF.

31 Work with Radiate Art to share high quality images of their murals for use by the ACF
32 interpretive materials and signage.

33
34 **Objective:** Protect remaining cultural features and values.

35 Route trails distant from cultural resources [SP Comment: What cultural resources exist? Are we
36 referring to ecological resources? Either way, perhaps we could be more specific.]; provide spur trails if
37 appropriate.

38
39 **Objective:** Maintain viable populations of plants and wildlife of cultural importance.

40 Coordinate with Chittenden County forester and Abenaki tribal forester(s) to manage black ash
41 trees [SP Comment: Is this actionable? Aside from tree injections, can we do anything to preserve these
42 trees?] given its cultural importance and the threat of the emerald ash borer. Identify and protect any

1 threatened butternut trees [SP Comment: Are there any butternut trees in ACF?] and any other culturally
2 important species in the ACF.

3 Consult with an Abenaki Forester or tribal affiliate upon any management plan revisions and
4 major management activities that may affect cultural resources. (See Appendix B, Part 3).

5
6 **Objective:** Include Indigenous perspectives, knowledge, and language in ACF educational materials,
7 management and naming practices.

8 Maintain a working relationship with the Western Abenaki People and welcome them to this
9 land.

10 Improve our community’s understanding of the cultural importance of ACF to Indigenous people.

11 Partner with Abenaki tribal representatives and others to develop and prioritize lists of culturally
12 important forest plant, animal and fungal species to help the ACFC manage them sustainably and to
13 provide educational materials. Such lists should include Abenaki names, scientific names, traditional and
14 current uses, traditional ecological knowledge and stewardship practices, potential threats, and other
15 information, stories or sources that would help in their sustainable management.

16 Choose AFC trail names from the list of Abenaki words for animals of the forest and landscape
17 features found in Appendix B, Part 4. These words were proposed and vetted by Abenaki tribal citizens
18 and culture keepers.). Take advantage of educational materials and programming for the UN International
19 Decade of Indigenous Languages 2022 – 2032. See:

20 <https://www.un.org/development/desa/indigenouspeoples/indigenous-languages.html>

21 Also, for exploring the potential for ACF to be an educational site for the Abenaki Trails Project, see:

22 <https://abenakitribe.org/abenaki-trails-project>

23 **5.1 Potential partners regarding ACFC cultural history**

1

2 **6. Wildlife and Natural Resources Stewardship (Brad + Sam)**

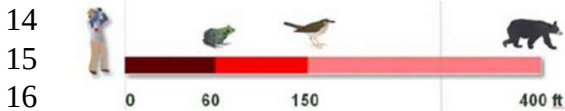

3 **6.1 Ecological Resources and Stewardship**

4

5 The ACF Conservation Easement and Richmond Town Plan call for maintaining the Forest’s ability to
6 support biodiversity amid climate and land-use changes. To guide this effort, this Plan uses the Vermont
7 Conservation Design (VCD)¹ framework to look at the ACF’s ecological resources from three
8 perspectives: landscape, community, and species.

9

10 Drawing from this comprehensive approach and numerous research studies, the Plan aims to minimize
11 human impacts on sensitive habitats by recognizing the area around trails known as their “zone of
12 influence” or ZOI, where wildlife can detect and respond to traffic, often adversely degrading the
13 habitat’s viability...

14
15
16
17 Wildlife can detect and show alarm at human
18 presence on trails over large distances known as
19 the zone of influence, or ZOI.

For some species in some terrain, ZOIs can extend beyond 1000 feet. As a general recommendation for New England forests, wildlife biologists advise keeping trail traffic 330-400 feet from sensitive areas². This guidance, supported by professional ecological assessments, informs this Plan’s strategies to ensure long-term human access to and

20 enjoyment of the full ACF without degrading its ecological integrity or its forestry, recreational,
21 agricultural, and educational values.

22

23 **6.2 Landscape-Level Elements**

24

25 Much of the ACF, especially above the former VAST trail, is ranked
26 “Highest Priority” or “Priority” by Vermont’s natural resource agencies as
27 contiguous interior forest supporting high-quality wildlife habitat and robust
28 natural communities.

29

30 ACF’s intact interior forest, ranked “Highest Priority” for its conservation
31 values (see illustration) supports wide-ranging species like black bears,
32 bobcats, moose, fishers and wild turkeys. Its ridges and ravines provide vital
33 migration corridors, foster genetic diversity and are ranked “Priority” for
34 promoting forest connectivity on a landscape scale. As the climate shifts, the
35 forest’s connectivity will facilitate northward species migration,
36 underscoring its role in sustaining regional biodiversity. Recognizing this, the

UVM researchers in the ACF spotted this bear watching them work.

1 ¹ <https://vtfishandwildlife.com/conservation/vermont-conservation-design>

2 ² [Naughton, 2021](#), [Oehler, 2017](#) and others. See References in Appendix.

1 ACF Conservation Easement highlights the need to conserve the ACF’s landscape connectivity to sustain
2 regional wildlife populations and mitigate habitat loss, fragmentation, and climate change effects.
3

4 **6.2.1 Landscape-Level Objectives**

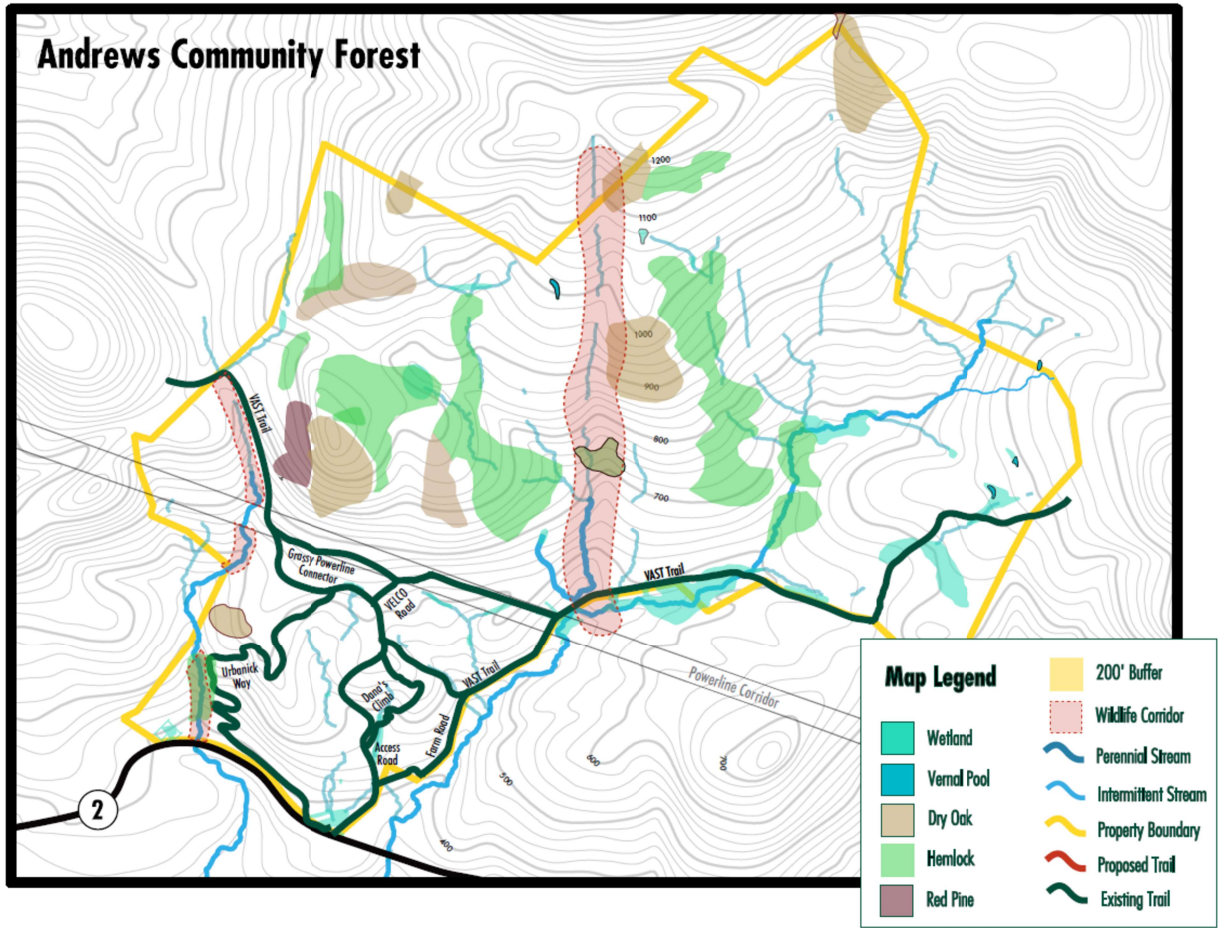

- 5 • Maintain the ACF’s ecological integrity, biodiversity and functionality, including its status as
6 “High Priority” and “Priority” interior forest and connectivity components of Vermont Conserva-
7 tion Design.
- 8 • Preserve interior forest health and connectivity to support black bears, bobcats, moose, fishers,
9 ovenbirds, hermit thrushes and other deep-forest species.
- 10 • Protect neighboring properties’ landscape-scale ecological integrity and pursue opportunities to
11 conserve and connect wildlife habitats.
- 12 • Protect soils, natural vegetation, water quality and natural climate change resilience through
13 measures shown to control erosion and prevent washouts from soil disturbances on slopes
14 exceeding 20 percent. Avoid disturbing any soil or duff layers on slopes over 35 percent. Monitor
15 existing trails on those slopes for damage and erosion, and take restorative measures that could
16 include closures.
17

18 **6.2.2 Landscape-Level Action Items**

- 19 • Maintain recreational access north of the former VAST trail at current types and levels while
20 creating new and diverse options south of the VAST trail (see Recreation).
- 21 • Work with the County Forester to implement the ACF Forestry Management Plan and enhance
22 the ACF’s interior forest and wildlife connectivity values.
- 23 • Replace invasive species with native vegetation.
- 24 • Develop a plan to reduce wildlife mortality along Route 2 crossings.
- 25 • Use public signage and events to educate visitors about ACF’s ecological role.

26
27 For more information, see the **Landscape-Level Elements Section** in the **Background to Ecological**
28 **Resources and Stewardship Appendix**

1 6.3 Community-Level Elements

2
3 The ACF encompasses ten upland and wetland natural communities vital for wildlife diversity. Each is
4 “an interacting assemblage of plants and animals, their physical environment, and the natural processes
5 that affect them³.” Undisturbed, natural communities provide needed food, shelter and breeding grounds
6 for myriad species.

7

8 ACF’s natural communities, particularly those north of the former VAST trail, hold “High Priority” and
9 “Priority” rankings in Vermont Conservation Design. Tracks, scratch marks, sightings, camera captures
10 and other evidence show ACF’s upland communities supporting whitetail deer, black bears, bobcats and
11 forest birds such as hermit thrushes. Wetland areas, while comprising less than 1% of ACF, support
12 important populations of amphibians, reptiles, and mammals. Riparian zones filter stormwater runoff to
13 protect water quality while also providing critical wildlife corridors.

1 ³ *Conserving Vermont’s Natural Heritage*. 2nd Edition. Vermont Fish and Wildlife Department and Agency of
2 Natural Resources. Waterbury, Vermont. 2013.

1 6.3.1 Community-level objectives

2

3

4

5

6

7

8

9

10

11

12

- Maintain the relative isolation and integrity of rare upland natural communities (e.g., Dry Oak Forest) to support the conservation needs of bears, bobcats, wild turkeys, hermit thrushes and other deep-forest, far-ranging species.
- Protect wetland and aquatic habitats, including vernal pools, for diverse species such as salamanders and wood frogs.
- Facilitate connectivity between upland and wetland habitats.
- Minimize disturbances to natural communities south of the VAST trail.

- Develop a Wildlife Stewardship Plan to protect the functionality of the ACF's community-level elements.
- Promote food, cover and structural diversity for terrestrial and aquatic species in upland and wetland natural communities.
- Maintain hiking, hunting, skiing, snowshoeing, birding, wildlife observation and other types of low-impact recreation north of the former VAST trail on existing forest roads. Identify routes best suited for these types of recreation and maintain them accordingly. Expand recreational opportunities between the parking lot and the former VAST trail to include new and improved trails for mountain bikers, casual walkers, runners, elderly residents and school groups.
- Work with County Forester, UVM resources and professionals to ensure adequate amounts of shade and coarse, woody debris in streams and wetlands.
- Assess and develop plans addressing these major challenges to the ACF's natural communities:
 - Invasive species
 - Tree and plant diseases
 - Climate change
 - Human impacts
- Use signs and outreach tools to inform and involve the public in conserving the ACF's natural communities and the ecological processes and benefits they support.
- Monitor the health of the ACF's natural communities and habitats.
 - Involve ACFC and public volunteers in a program combining field visits, camera and audio traps, and consultations with experts.
 - Utilize black bear and bobcat [and ____ songbirds/raptors?] as indicators of the overall biodiversity and health of the ACF.
- Maintain or enhance conditions for wildlife in and among the ACF's natural communities:

- 1 ○ Improve deer population management so the ACF’s herd can contribute to its health and species
- 2 diversity. Encourage hunting subject to VT regulations. Employ exclosures to both track and
- 3 demonstrate impacts of deer browsing the forest understory.
- 4 ○ Protect mast-producing areas from disturbances during fruiting and wildlife foraging seasons.
- 5 ○ Monitor forest health and quantitative/qualitative changes to its habitats (see Appendix [redacted]).
- 6 ○ Post to *Times Ink!*, *Front Porch Forum*, the ACFC webpage and social media information about
- 7 the ACF’s natural and cultural history, and efforts to protect and enhance its natural communities
- 8 and other habitat features.

9
 10 **For more information, see the [Community-Level Elements Section](#) in the [Background to Ecological](#)**
 11 **[Resources and Stewardship Appendix](#)**
 12

13 **6.4 Species-Level Elements**

14 ACF offers specialized, critical habitats for certain species. Hemlock groves provide winter shelter for

15 deer, enabling them to conserve energy during the

16 leanest months. Oak, beech, blueberry and other

17 sources of mast support over 100 species, including

18 black bears and turkeys. Ledges and rocky areas serve

19 as vital habitats for bobcats, ruffed grouse and other

20 animals. Early successional habitats foster biodiversity

21 by supporting young tree growth and associated fauna.

22
 23
 24
 25
 26 Much of Richmond’s prime bobcat habitat (green) exists

27 in the northern part of the ACF. *Source: 2020.*

29 [Middlebury College.](#)

30 **6.4.1 Species-Level Objectives**

- 31 • Conserve rare, threatened, and endangered species by integrating updated information into
- 32 management plans.
- 33 • Maintain the functionality of mature softwood cover for wildlife wintering and ensure nearby
- 34 food sources.
- 35 • Promote the health and viability of mast-producing trees and shrubs.
- 36 • Enhance early successional habitats to diversify species and age structures.

1 **6.4.2 Species-Level Action Items**

Hemlock stands not only shield deer and other wildlife from winter snows and winds, but they also provide nesting spaces for interior forest birds such as the hermit thrush.

hard-mast stands areas during fruiting and foraging seasons.

- Provide education and updates about ACF’s efforts to preserve its species and habitats.

- Engage ecologists to survey proposed trail routes and infrastructure areas for rare species within 50 feet of their sides and adapt conservation plans accordingly.
- Maintain at least a 70 percent canopy within hemlock stands. Close trails within 100 meters to all but hunters from November through March.
- Manage deer populations with regulated hunting. Install exclosures to demonstrate browsing impacts and nurture seedlings.
- Maintain the oak and other mast requirements of black bears, wild turkeys, white-tailed deer and other species. Avoid disturbing soft- and

1

2 **7. Recreation Management (Chase + Jim)**

3 [BE: Note: This section appears not to have been reviewed by Chase and Jim. Comments were made with
4 the understanding that many may be moot should such a review take place.]

5 **7.1 Recreation as addressed in the Conservation Easement**

6 The Conservation Easement notes that the ACF is “one of Vermont’s largest blocks of unfragmented
7 interior forest.” The continued loss of Vermont forest lands makes the ACF even more ecologically
8 valuable. The “Purposes” of the governing Conservation Easement allow conserving the ACF’s natural
9 resources while continuing to provide public access to the Forest in appropriate ways.” [BE: The first
10 “Purpose” of the Easement does more than “allow” conservation – it mandates it.]

11

12 The Conservation Easement (Page 6, III Permitted Uses of the protected Property, Paragraph A) allows
13 for non-motorized, non-mechanized recreational use of the forest (i.e., walking, snowshoeing, skiing, and
14 hunting). Additionally, Section IIIA of the Easement allows for “snowmobiling, and for non motorized
15 mechanized recreation such as mountain biking, and by animals capable of transporting humans as
16 regulated in the Management Plan and are consistent with the Conservation Easement Section(s) V, VI
17 and VII. that identify constraints within the Riparian Buffer Zone, [rare and uncommon natural
18 communities], the Ecological Protection Zone and Vernal Pool Ecological Protection Zone. The
19 Management Plan must provide the rules for these three uses and guide the management of recreational
20 infrastructure. [BE: This should note the condition the Easement puts on all “allowed” activities plus any
21 others not listed. The Town is required to abide by “Purposes of the Grant.” The first mandates us to
22 “conserve productive forestland, wildlife habitat, biological diversity, natural communities, riparian
23 buffers, wetlands, soil productivity, water quality and native flora and fauna...and the ecological
24 processes that sustain these natural resource values....”]

25 **7.2 Trail-based Recreation**

26

27 **Trail-based recreation impacts on wildlife and benefits of outdoor recreation and nature**

28 The natural communities of the forest are not confined to human-drawn boundaries. Therefore,
29 conservation and stewardship of wildlife habitat, water resources, and vegetation must recognize impacts
30 beyond those boundaries. Research, including peer-reviewed studies and meta-studies (e.g. Baas 2020
31 Hennings 2017, Naughton 2021, Oehler 2017, Taylor, and Knight, 2003; Parker 2022, Larson 2016) has
32 increased understanding of the negative impacts that human presence and trails can have on wildlife,
33 including how trail traffic can frighten and harmfully stress wildlife within “zones of influence” that may
34 extend hundreds of feet from trails. (See also <https://infoacf.wordpress.com/literature-and-science/>)

35

36 However, people’s physical and mental health benefit from being outdoors. An article entitled “Health
37 and wellness benefits of being outdoors” (Avitt, 2021) published by the Forest Service of the US Dept of
38 Agriculture reports benefits under the headings of physical wellness, mental wellness, and wellness in
39 the community. A review of published literature (Eigenschenk et al., 2019) examined evidence about
40 benefits to physical health, mental health and wellbeing, education and lifelong learning, active

1

1 citizenship, crime reduction, and anti-social behavior, and concluded that a combination of physical
2 activity and being in nature provided a range of significant benefits. Weinstein et al. (2015) addressed the
3 links between contact with natural environments and community cohesion, and crime. They reported that
4 the amount of time spent in nature was linked to more community cohesion. In turn, perception of
5 cohesive communities enhanced measures of people’s individual well-being and contributions to society
6 through higher workplace productivity and environmentally responsible behaviors. They also found
7 indications of linkage to lower crime both directly and indirectly through its effects on community
8 cohesion.

9
10 Therefore, human presence and activity in the Forest can have negative effects on wildlife, and positive
11 effects on human wellbeing The Town cannot serve the aspirations of all potential recreational users of
12 the ACFC, nor the hopes of those who recommend eliminating all human disturbance. Additionally, the
13 Town has little control over ecological protections in adjoining properties. [BE: No one is proposing
14 either of those extremes. The statement is a red herring and potentially inflammatory. In addition, the
15 preceding paragraph only states the obvious. Alongside conservation, the Easement requires us to
16 “provide” “appropriate” recreational uses. The paragraph’s last two sentences should be cut.]

17 18 **Town residents’ preferences for allowed activities**

19 A 2018 survey (see 2018 Management Plan, [Appendix G](#), page 279) asked town residents to indicate their
20 preferences for activities they would like to see allowed in the ACF. The ten most favored, in order of
21 preference, were hiking, running, hunting, snowshoeing, skiing, bird- and wildlife-watching, picnicking,
22 biking and dog-walking. Some Town residents identified connectivity with abutting trail systems to be an
23 important attribute of trail design, while others were concerned that increased traffic would impact
24 sensitive wildlife habitats. Expanding trails into the Forest’s most sensitive areas and linking them into
25 larger, unregulated networks would tax the Town’s ability to protect the ACF’s ecological resources and
26 to manage safety for people using more remote trails. [CR Comment: subjective.....try “could possible
27 tax”]

28
29 [BE: Suggest adding the following text here as another subsection:]

30 **Trail Design Principles**

31 Trail development and management in the ACF are guided by the principles listed on page 4 of the [The](#)
32 [Vermont Town Forest Trail Design Guide](#):

- 33 Avoid sensitive ecological areas and critical habitats.
- 34 Develop trails in areas already influenced by human activity.
- 35 Provide buffers to protect sensitive ecological and hydrologic systems.
- 36 Use natural infiltration and best practices for stormwater management.
- 37 Ensure ongoing stewardship of trails and surrounding natural systems.
- 38 Design, build, and maintain trails sustainably.
- 39 Decommission and restore unsustainable trail corridors.

40 41 **Naming of Trails:**

42 **Note:** The suggested names in Appendix B use animal names, which do not necessarily correspond to the
43 prevalence or habitat of the named species. Conversely, the English Language proposed names are
44 indicative of landscape etc. features. ACF will support the revival of the Western Abenaki language and

1 culture by using Abenaki language for places, practices, flora, and fauna in the naming of trails,
2 educational materials, and signage. Trails will be named to help bring Indigenous presence and language
3 back to this landscape (rather than contribute to their erasure). Appendix B: Indigenous Recognition, Part
4 4, identifies suggested names that were proposed and vetted by Abenaki tribal citizens, culture keepers
5 and language experts.

6
7 **General Regulations** [BE: Usage regulations are likely to be updated more often than the MP. Putting
8 them in the MP could shorten its shelf life. This and the next five sub-sections would best be published
9 elsewhere – the ACFC web page, the kiosk, with printed maps, annotations to TrailsFork listing, etc.]

10 To address the often competing interests of human and Forest health, the following regulations about
11 recreation are proposed:

- 12 1. No access for horses and similar animals; Horses are a major vector of invasive species spread.
- 13 2. Pedestrians are allowed on all trails; Mechanized recreation only on trails identified for such use on the
14 Trails Map; [SP Comment: Consider adding to trail signage as well.]
- 15 3. No mechanized recreation during hunting seasons, during (specified) winter months or when trails are
16 announced as ‘closed’ via public notices;
- 17 4. Electric bikes (eBikes) are not generally allowed on the trail network, based on concerns regarding
18 their faster speeds, safety, possible user conflict and the non-motorized provision in the Conservation
19 Easement. Recognizing that eBikes may broaden access for individuals with physical limitations and
20 consistent with a commitment to equity and inclusion and the ADA, any ACF visitors with mobility
21 disabilities who wish to use motorized personal assistive mobility devices (as permitted in the
22 Conservation Easement, Section G) should contact the ACF Committee.

23 **Dogs**

24 **Figures ?:** Dogs on Trail Rules

25 <https://infoacf.wordpress.com/wp-content/uploads/2023/06/dogs-on-trail-rules-covallis-2019.jpg>

26 <https://infoacf.wordpress.com/wp-content/uploads/2024/09/whynodogs.jpg>

27 Dogs are permitted below the power lines, and not above them. [SP Comment: I generally agree this is
28 the responsible thing to do, but I would offer that we make a slight adjustment— changing it from power
29 line to VAST trail. It only slightly changed the allowed trails for dogs, and also allows for better
30 connectivity to surrounding properties for dog owners without having a major impact on wildlife.] Dogs
31 are to be kept on leash at all times, following the model of the Audubon Society (Huntington), in order to
32 protect the forest wildlife. This is more stringent than the town dog ordinance, and is intended to protect
33 wildlife and vegetation as well as other forest users. Hence no hunting with dogs. Voice control may not
34 always be effective, and may disturb wildlife anyway because of the (loud) vocalization required.

35 All pet waste must be carried out.

36 **Signage at property boundaries with trails and liaison with adjacent owners**

37 There are three existing possibilities for trail connectivity: VYCC, Sip of Sunshine and Valley View.
38 At each access point from adjacent properties clear signage will indicate what is and is not permitted,
39 using text as posted at the kiosk.

40 **Events/permitting**

1 People and organizations wishing to hold events in the ACF should apply to the ACF at least two ACF
2 meetings in advance of the event date. (See Easement, Events p7, section J)
3 Fees may be determined in proportion to and in accordance with cost of the events.
4 Approval of events will be determined by the ACFC according to criteria including but not limited to:
5 Appropriateness of use per the objectives of the MP and the Easement, expected numbers of participants,
6 location and extent of the event, parking requirements, the likely ecological impact on the trails (if
7 applicable) and on flora and fauna (for e.g., deer wintering, spring vernal pools, etc.).

9 **Determining trail closure times**

10 Decisions on seasonal trail closures address the following criteria: Quality of the activity relative to the
11 season; Minimize incompatibilities among activities for maximizing safety (for example, minimizing
12 non-hunting uses during hunting season, establishing directionality of trails for bikers where necessary);
13 Minimize impacts on animal habitat. Following state guidance for deer wintering closures, the trails will
14 be closed above the power lines from December 15 - April 1 to protect habitat and desirable game
15 species. People may still recreate across ACF in a dispersed manner (eg x-c skiing) but trails will not
16 officially be open. Trails will be closed to bikes from hunting season through April 1st to reduce the
17 number of visitors, and the extent of their presence disturbing deer in wintering habitat. Question: why
18 only bikes? Would skiers be similarly disturbing? Walking is allowed at all times with STRONG
19 cautions to wear highly visible clothing during hunting seasons.

20 [IAFS: Yes, the whole issue of restricting human activities seasonally is difficult! Your comments seem appropriate
21 to include somehow. But firm 'rules' seem elusive.] [BE: Usage regulations are likely to be updated more often
22 than the MP. Putting them in the MP could shorten its shelf life. This and the next five sub-sections would best be
23 published elsewhere – the ACFC web page, the kiosk, with printed maps, annotations to TrailsFork listing, etc.]

25 **Enforcement of Trail use Policy**

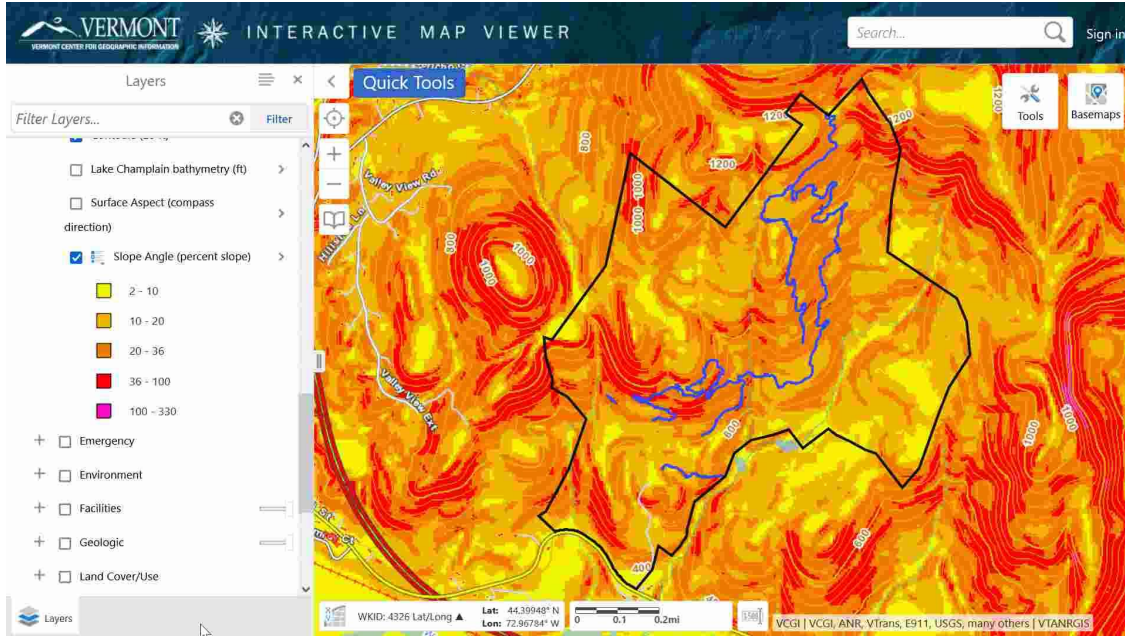

26 Clear signage and a map will be maintained at the kiosk and other formal access points to identify
27 permitted uses and guidance for users and trail closure status. Public should be notified of trail closures at
28 the Town Website and through notices at Richmond's Front Porch Forum. Ropes will be placed across
29 trail entrances when trails are closed seasonally or temporarily for trail maintenance such as clearing
30 downed trees.

31 **7.2.1 Process for Considering Future Trails**

32 Proposals for new trails shall not be approved for construction until a new Trail Design Map is adopted
33 through a full revision of the Management Plan, which is subject to public review and approval by the
34 Selectboard, and the Easement holders. [BE: The word "through" in the previous sentence is ambiguous
35 as to whether the MP drives the trail design or the (problematic)opposite. Suggested rewording:
36 "Proposals for new trails must comply with the latest approved update to the Management Plan.
37 Otherwise, the Management Plan must first be fully revised, publicly reviewed and approved by the
38 Selectboard and Easement holders."]

39 In considering the appropriateness of proposing any new future trails, the Committee will (1) seek
40 appropriate professional guidance to assist it in evaluating trail sustainability and the impact of trails on
41 the ACF's wildlife and forested ecosystems; [BE: ACFC members, the SB and public will need to know
42 more. Suggest leading this list with (1) Document the need for and benefits of a new trail] (2) comply
43 with Richmond's Zoning Regulations and Town Plan [BE: Suggest: (3) Obtain estimates for building it

1 and its infrastructure.] (3); engage with the community via an open public process addressing the Town
 2 Plan and Management Plan’s objectives to offer recreational opportunities while protecting the ACF’s
 3 natural resources. Zoning permits for new trail construction may require a professionally prepared site
 4 plan and an engineering design plan. [BE: I believe Tyler referred to an “Erosion and Sedimentation
 5 control plan.”]
 6

7
 8 **Figure 5:** Slopes of terrain in the ACF, with proposed trails overlaid. Richmond’s Zoning
 9 Regulations identify special provisions for development on slopes greater than 20%, and greater
 10 than 35%. Map source: Vermont [Interactive Map Viewer](#).

11 [BE: A map showing only slopes from 20-35% and above 35% would be more helpful. It would probably
 12 also be better if placed in the Trail Stewardship Plan, along with other maps showing ACF’s landscape-,
 13 community- and species-level attributes.] [IS: Not easy to make changes to this map – but it uses slope
 14 thresholds that happen to be the ones in Richmond’s Zoning.]

15 Any new trail will avoid impacting ecologically sensitive areas (via buffers and Zones of Influence);
 16 avoid duplication of trail routes and high density of trails; avoid trail routes liable to erosion.
 17 Evaluation of suitability of new trail proposals should take into account the results of monitoring of
 18 impacts of existing and prior trails. A new trail proposal should identify whether it is intended for
 19 mechanized (bike) use, and explain why, taking into account the criteria and regulations for allowing
 20 mechanized use in the Easement Page 6 (Page 6 Section IIIA “Permitted Uses of the protected Property”).

21 [BE: The following section, though important to ACFC’s drafting of the MP and trail designs as well as
 22 to discussions of other Town boards, needn’t belong in the MP.]

23 **Some Factors to Consider in Evaluating new Trail Proposals:**

24 **In favor:**

1. The Easement cites 'connectivity' as desirable;

- 1 2. Many people have expressed a desire to see a connection to the Sunshine trail network and beyond,
2 (though many have opposed it with valid reasons, see below);
- 3 3. The trails were designed with Arrowwood's ecological expertise and were considered consistent with
4 ecological design principles. (Arrowwood/Sinuosity [Trails Proposal](#))
- 5 4. Trails, if designated as 'multi-use' would accommodate people using mechanized transport, thus
6 increasing the variety of possible recreational activities and participants.
- 7 5. Increasingly, people are recognizing the value of many forms of outdoor recreation to health and
8 wellbeing. Additional trails in more remote sections of the Forest would add to those opportunities.

9
10 **Not favoring the proposed trails:**

11 [BE: Another point: Arrowwood has expressed its professional misgivings about the SOS connection,
12 explaining that the firm was required to map a such a route despite its ecological impacts.]

- 13 1. The Wildlife Stewardship Plan provides a thoroughly researched and updated documentation of the
14 ecological reasons why human presence, especially as facilitated by trails, should be minimized,
15 especially above the power lines;
- 16 2. The terrain on which those trails are proposed is mostly steep, and some areas apparently exceed the
17 30% slope above which the Town Zoning regulations preclude trail development. Slope of the terrain in
18 many other areas exceeds 20%, thus requiring a lot of financial expense and a long permitting process
19 with no guarantee of approval.
- 20 3. Some of the proposed trails appear to be inconsistent with ecological principles documented in the
21 Management Plan (proximity to streams, wetlands, etc., infringement on ecologically sensitive areas)
22 where recent research has identified greater negative impacts of human presence.
- 23 4. Some Townspeople wish to reserve areas of the Forest where solitude can be enjoyed, and wildlife can
24 be observed, or hunted. More trails would facilitate larger volumes of human traffic.
- 25 5. Unknown factors include anticipated volume and cumulative effects of trail traffic, and the possible
26 future changes in access to the trails on adjacent properties.
- 27 6. An extensive trail network accommodating 'mechanized travel' would require infrastructure to
28 accommodate steep and rugged terrain, stream crossing requiring bridges, boardwalks etc. This would
29 require additional expenditure of efforts and resources by the Town to construct, monitor and maintain
30 trails in a location where access and parking may limited their value relative to other already existing
31 nearby trails.

32 [BE: Another point: No one has yet identified a compelling need for building the SOS connection that
33 justifies its costs, ecological trade-offs and management challenges.]

34 **7.2.2 Trail Connectivity to Surrounding Properties**

35 The conserved lands around the ACF provides opportunities for a larger, connected trail network. [BE:
36 Connections to neighboring lands are "opportunities" only if they meet the Easement's Purposes. They
37 also must be based on need, with gains that will exceed the costs (ecological and economic alike).
38 Connections already exist to neighboring lands, including others not noted here.] The former VAST trail
39 already connects the VYCC and trail networks. Consistent with the Easement's recreational objectives,
40 the ACF Trail Design addresses connections to existing, mapped, public trails on properties adjoining the
41 ACF. Any trail connections with adjacent properties will be subject to mutual agreement, including
42 signage to be installed at boundaries to indicate land ownership and allowed uses.

1 [BE: As with streams, trails should perpendicularly cross the boundary to minimize traffic impacts along
2 that boundary.]

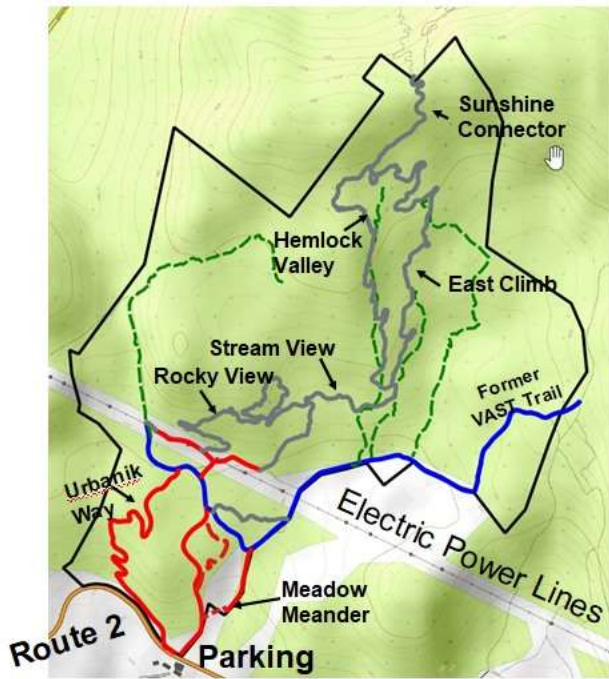

3 7.2.3 Process for Constructing Approved Trails

- 4 ● A hired professional trail designer will flag a route that, to the best of their ability, follows the
5 route appearing in the approved Trail Design Map.
- 6 ● A professional ecologist, will walk the flagged route and a 50 foot buffer on either side to
7 determine whether there are any fine-scale features (rare, threatened, or endangered species) that
8 would be adversely impacted by the proposed trail development. If there are, the trail designer
9 will consult with the ecologist to identify a suitable re-route.
- 10 ● The Committee may make minor adjustments to the Trail Design Map to ensure a 200’ buffer
11 between the trail and known sensitive areas, as identified and mapped in existing ecological
12 assessments. [BE: Words like “may” and “minor” in the preceding sentence provide little
13 guidance for ACFC decision-making. Further, they subjugate the entire Forest’s ecological needs
14 to trail aspirations throughout, in conflict with the Easement and best practices. Also, the 200’
15 buffer is a carry-over from MP1, and short of the latest, research-based recommendations for
16 maintaining ecological integrity and long-term, sustainable human access.] Following Easement
17 holder and Selectboard approval, the Committee will proceed to work with the Richmond Trails
18 Committee, volunteer groups or individuals and/or a hired trail-builder to install trails which meet
19 standards and designs agreed upon by the Committee and approved by the Selectboard and DRB.
- 20 ● The ACFC will seek grant funding as necessary to support the design, construction, and
21 maintenance of trails approved and included on the Trail Design Map.
22

23 7.2.4 Trail Design Map

24 [BE Comments: Trail designs need to follow criteria contained in an approved Management Plan, thus
25 this section is premature. Also, when the MP is approved and a trail design published, the ACF shouldn’t
26 be shown as a blank slate. The design can’t be evaluated without a map or maps showing proposed trail
27 routes and their appropriate zones of influence in conjunction with the ACF’s natural communities,
28 connectivity routes, steep slopes and other sensitive features.]

29 The 2018 Trail Concept Map was intended as a “roadmap to trail construction” in which the proposed
30 trails “reflect the approximate desired location of future trails, pending the results of the coarse- and fine-
31 scale ecological assessment”. The present Trail Design Map
32 is an extensive development from the Concept Map, based on the [design](#) proposed in a contract with
33 Arrowwood Environmental and Sinuosity and [subsequently modified](#) in response to public input and
34 Zoning considerations, and recognizing published and peer-reviewed expert findings and
35 recommendations about trail impacts. [BE: The new design was produced ahead of the required revision
36 of MP2 and thus without benefit of whatever trail placement guidelines the new document will contain.
37 Some changes made to the design reflect expert knowledge and best practices. But significant concerns
38 remain with some of the proposed routes.]

(Trail names from Arrowwood Proposal)
 Red: Existing (Urbanik Way, Access Road, Dana's, etc.)
 Red-Dashed: Pedestrian Only Trail
 Gray: Currently proposed ('Rocky View, Hemlock, East Climb, Lower traverse)
 Green (dashed): existing Forest Roads

The present Trail Design Map proposes an enduring, sustainable trail network that should not be expanded, to protect the natural resources within the ACF and also to honor the desires of the Andrews family and community intent documented in the Management Plan. It is intended to achieve a trail network that is consistent with minimizing ecological impacts of trail-based recreation. [SP Comment: This map may not be accurate— we still have to determine the trail design for ACF, both in terms of zoning/development feasibility, engineering site plans, and effects on wildlife.] [BE: “Enduring” and “sustainable” as used above are unsubstantiated, self-serving claims. They’re also questionable in light of the impacts of higher volumes of trail traffic on nearby natural communities, steep slopes and other sensitive areas, and the safety and enjoyment of users of these trails.]

General Principles and Objectives for the trails design

The plan creates a lower density of trails above the powerlines and higher density below the powerlines to place equal emphasis on conservation of the interior forest areas of the property, while still facilitating public access. [BE: Given the high conservation status of the ACF and its density of sensitive area, we should be designated its most sensitive and hard-to-access landscape as a conservation zone, open to all of the recreational activities that take place in it now but with no projects to channel new traffic into it. Given that area’s steep, rugged terrain, new trails in a recreational zone between the parking lot and VAST trail would be much more inviting and used by “people of all ages and abilities...”] It provides shorter loops at a lower grade from the parking area to ensure the property is accessible and inviting to people of all ages and abilities, non-mechanized (pedestrian) trails are designated to accommodate school trips, families with young children or older people, providing easy to moderate walking for 45 to 60 minutes.

Trails avoid sensitive areas [SP Comment: Based on the current proposed trail design map, they do not avoid sensitive areas/EPZs.] [BE: Trial impacts would still degrade the ecological functions and integrity of dry oak forests, riparian areas, wildlife wintering areas, mast stands, seeps and other sensitive areas.] (EPZs, etc) and give an appropriate buffer to sensitive areas, as determined by professional ecologists and with reference to the Conservation Easement. [BE: The Easement’s EPZ’s are not necessarily aimed at protecting habitat. The riparian area EPZ’s for example, seem geared toward protecting water quality and

1 not wildlife habitat and connectivity.] To reduce impacts by avoiding sensitive areas, 'buffer' widths; are
2 specified as "300-foot" to reflect current ecological science.

3 4 **Existing roads and trails**

5 1. Except where they coincide with the proposed trail network, existing logging roads and skid trails will
6 not be maintained as trails and will not be shown on ACF trail maps (although during future forest
7 management activities, they may be maintained by the forester and logger). [BE: The Zoning
8 Administrator recommends against this prohibition due to the permitting requirements it would force onto
9 the ACFC. This measure would strip away the value hikers, hunters, skiers, birders and others find in the
10 ACF's network of forest roads, And it would require the Town to assume the yet-to-be-presented costs
11 and risks of building trails in steep, remote areas]

12 2. Dana's Climb to be renamed as Camel's Hump View [SP Comment: This isn't consistent with the
13 choice to use Abenaki names for the trails.] and is to be pedestrian only.

14 3. Urbanik Way should be re-routed to start higher in the parking lot to bypass persistently wet ground,
15 scramble up rock, and a section passing very close to Rt 2.

17 **Modifications to Arrowwood Proposal:**

18 [BE: As welcome as any modifications will eventually be, we need a completed MP2 to base them on.
19 Otherwise, and as the next three comments show, the concerns behind them are being arbitrarily applied,
20 outside of any consistent management guidelines.]

- 21
- 22 • The proposed East Climb and Hemlock Valley trails will be rerouted to avoid wet areas and
23 rare/sensitive plants, per [Arrowwood fine-scale review](#) late summer 2022.
- 24 • The proposed Ridgetop trail was removed from the proposal, as it tracks closely to the ravine that
25 serves as a key wildlife corridor. [BE: For the same reason, Stream View needs to be re-routed
26 away from its parallel route along that same corridor.]
- 27 • The proposed central path between Cascade Trail and Rocky View [SP Comment: Hemlock
28 Valley and Rocky View are problematic due to being in hemlock natural communities, and too
29 close to ledges.] was removed from the plan; instead, the two should be connected where they
30 are closest to one another towards the southern end. Rocky View and Cascade are pedestrian
31 only (Stream View [BE: Stream View still appears to run parallel and too close to the central
32 corridor and its riparian area. (Again, a map including sensitive areas and trail proposals with
33 their ZOIs would make this instantly clear.)], which is one access point for those two trails, will
34 have both pedestrian and non-pedestrian traffic). Note – potential slope problem in that area.
- 35 • The Roadside Trail was removed from the proposed network as it is redundant, paralleling the
36 road, and would pass through persistently wet areas making trail construction “tricky” per
37 Arrowwood and Sinuosity [report](#), requiring bridges, ramps, puncheon, etc.
- 38

39 **Pedestrian-only Trails:**

40 1. All Existing Forest Roads and the (renamed) Dana' will be designated as pedestrian-only.

42 **Trail-free zones**

43 Other than proposed trails, current connection to VYCC trails, and where present-day VAST trail
44 connects, all other areas of the forest are designated as trail-free. Refer to Wildlife Stewardship Plan?

1 **7.2.5 Trail Monitoring, Maintenance, etc.**

2 Trail users will be encouraged to notify the ACFC of any observed problems requiring attention (downed
3 trees, erosion, invasive plants, etc.) via the email address listed at the Town website. The ACFC member
4 who is the Richmond Trails Committee representative will be a designated as responsible for monitoring
5 trail conditions, coordinating maintenance and repairs, and publicizing trails' status.

6
7 **Monitoring of trail traffic** [SP Comment: Should we consider adding a visitor sign in log?] and status
8 should include counting or estimating the number of visits, making periodic surveys of plants (including
9 invasives) and animal populations, and inspecting for trail erosion. The plan should establish baselines
10 and then monitor changes over time. [BE: This is good but vague. It should describe how, when and
11 where the baselines will be established, perhaps with a reference to more detail in the Eco section or
12 Wildlife Stewardship Plan. The baseline data shouldn't be collected from a forest newly disturbed by trail
13 traffic.] Results of monitoring shall be reported annually at a meeting of the ACFC. Management actions
14 shall be adjusted according to the results of the monitoring plan per the adaptive management model in
15 **Figure 3.**

16 Monitoring should start with sensitive areas identified by the [Arrowwood report](#) recommendations, and
17 the 2019 [Field Naturalist Report](#) and employ game cameras, observations by citizens science and forest
18 monitoring coordination.

19
20 **Invasive species management**

21 Seasonal visual inspection for invasive species will be conducted by ACFC and removal / mitigation will
22 be planned accordingly. Guidance shall be sought from the Conservation Commission, local experts such
23 as Jon Kart (Vermont Agency of Natural Resources, Fish & Wildlife Department) and others on
24 monitoring methods and control measures for identified invasive species. [BE: The County Forester
25 needs to take a lead role in this, especially given the critical importance given to this topic in the Forestry
26 Management Plan. (Assuming the updated Forestry MP picks that up from the original one.)]

27
28 **Monitoring impact of human presence in forest**

29 [BE: Again, data will be meaningless unless there are benchmarks and standards relating to trail carrying
30 capacity for ecological protections, user safety, user enjoyment, etc., all of which should be covered in the
31 trail proposal.]

32 Quantitative and qualitative data collected will be reviewed regularly and guide the Committee in
33 prioritizing trail maintenance and upgrades. Trail user counters will be installed at base of each trail, and
34 counts retrieved periodically. A non-arbitrary decision-tree will be established to guide actions when
35 certain numbers of users are on trails.

36 **Methodology:**

- 37 1. National Bicycle and Pedestrian Documentation Project (2016): A simple method for extrapolating
38 from sample monitoring to estimate longer term traffic volume. <https://bikepeddocumentation.org>
- 39 2. SE Group (2017) Monitoring Traffic on Hinesburg Town Forest (2017)
40 https://drive.google.com/file/d/1uUC0Vwym_BjyvSnyVy58z4Qp40p6ElBT/view
- 41 3. Monitoring traffic on Johnnie Brook Trail <https://infoacf.files.wordpress.com/2023/04/jbt-kh.pdf>

42 Seasonal visual inspection of trails for erosion and maintenance requirements will be conducted by the
43 ACFC. Trail maintenance will be planned seasonally and as needed and will be coordinated with the

1 Trails Committee to supervise work and to recruit volunteers. The ACFC member who is the Richmond
2 Trails Committee (RTC) member will liaise between ACFC and the RTC and other groups.

3 **7.3 Snowmobiling**

4 Previously the ACF contained a snowmobile trail that was part of the VAST trail network. Snowmobiling
5 will be permitted in the ACF if and when VAST seeks to establish such trails and subject to a use contract
6 ensuring compatibility with the Management Plan’s goals and objectives.

7 **7.4 Hunting**

8 Many people want to hunt in the ACF. Hunting is allowed on the property in accordance with all State
9 and federal laws and allowable uses. As of 2021, citizens of recognized Abenaki tribes may obtain free
10 hunting licenses from the state of Vermont. The ACFC will emphasize education about hunting season
11 safety for both hunters and non-hunters. Trapping will not be permitted on the Town Forest because of the
12 safety hazard it presents to visitors and their pets who may be traveling both on and off trail.

13 **7.5 Potential Recreation Partnerships**

14 [BE: Add Richmond Conservation Commission, County Forester, Vermont Fish & Wildlife Department,
15 UVM Community Forest Program]

- 16 ● Richmond Trails Committee
- 17 ● Western Abenaki Tribes and Richmond Racial Equity
- 18 ● Maple Wind Farm
- 19 ● VYCC
- 20 ● Richmond Land Trust
- 21 ● Richmond Mountain Trails/Vermont Mountain Bike Association (VMBA)
- 22 ● Scouts
- 23 ● Community Senior Center

24 **7.6 Recreation Management Objectives and Actions**

25 **Objective 1:** Develop and promote a community forest that accommodates a wide variety of recreation
26 opportunities (hunting, hiking, skiing, mountain biking etc.) subject to the provisions of the Conservation
27 Easement and this Management Plan as it may be revised from time to time.

28 **Actions:**

- 29 ● Maintain existing trails and design build new trails in conformity with the **ACF Trail Design Map**
30 and provisions in this Management Plan [BE: Another appearance of the cart in front of the horse.
31 Specifying a pre-existing “Trail Design Map” circumvents basing such a map on expert-derived,
32 agreed-upon criteria clearly spelled out in the Management Plan. To do otherwise opens the way
33 to arbitrarily applied rules, and inconsistent, ineffective management of the property over time.]
- 34 ● Choose trail names that bring Indigenous presence and language back to this landscape and create
35 signage accordingly. Consult Appendix B, Part 4 for suggested names that were proposed and
36 vetted by Abenaki tribal citizens, culture keepers and language experts.
- 37 ● Maintain a trailhead kiosk at the parking lot with information about wildlife and natural
38 resources, hunting seasons, hunting safety, trail etiquette, agricultural uses of the property,
39 allowed user groups, property ownership, cultural and ecological information, etc.

- 1 • Include the short version of the Land Acknowledgment at all signed entrances, on kiosks and on
- 2 maps stating: “The Andrews Community Forest is located within Ndakinna, the unceded
- 3 homeland of the Western Abenaki People, who have a unique connection to this land and have
- 4 been its traditional stewards.” (See Appendix B, Part 1.)
- 5 • Install a bike rack at the East Main Street entrance to the Community Forest
- 6 • Work with neighboring landowners to address any changes in landownership and allowed uses.

7

8 **Objective:** Manage the recreation infrastructure in a way that best honors the needs of the forest and its

9 users.

10 **Actions:**

- 11 • Work with the Trails Committee to organize, advertise, and facilitate routine maintenance, acute
- 12 maintenance, and trail work days and recruit volunteers.
- 13 • Establish the ACFC email address as the means for trail users to communicate any need for trail
- 14 maintenance (downed trees, erosion, etc.) or user conflicts.
- 15 • Maintain a process to monitor and communicate trail conditions to the public.
- 16 • Monitor impacts of recreational use on natural resources and adapt management strategies
- 17 accordingly: [BE: Suggest beginning this point with “Establish benchmarks and management action
- 18 points, and monitor impacts...”]
- 19 • Explore possibilities for creating a walking/biking connection from the ACF to Richmond Village.
- 20 • Evaluate applications for hosting trail-based events and races on forest trails if ecological monitoring
- 21 indicates an ability to do so without negative impacts to forest ecosystems and trail infrastructure.
- 22 [BE: We needn’t limit this to “trail-based events and races” as many forms of recreation take place
- 23 off trails. Suggest just saying “activities in the ACF.” (Of course, we should also be sure to build
- 24 trails “without negative impacts to forest ecosystems.”)]
- 25 • Employ current best practices on balancing the needs of both habitat and recreational users.

1

2 8. Agriculture Management (Wright updates)

3 8.1 Potential Agriculture Partnerships

- 4 ● Maple Wind Farm
- 5 ● Richmond Farmers Market
- 6 ● Richmond Community Kitchen
- 7 ● The Farm at VYCC
- 8 ● NOFA Vermont
- 9 ● Vermont Farm Bureau (Remove)

10 8.2 Agriculture Management Objectives and Actions

11 **Objective:** Recognize the importance of agriculture in Richmond and Vermont’s heritage and continue to
12 allow agricultural uses that are compatible with other management goals.

13 **Action:**

- 14 ● Promote opportunities for agriculture education and demonstration on the parcel, perhaps in
15 conjunction with Maple Wind Farm or other agricultural entity with a vested interest in the
16 property.

17
18 **Objective:** Develop agreements with Maple Wind Farm or other farm entity to allow coexistence of
19 agriculture and public access.

20 ● **Actions:**

- 21 Work with neighboring Maple Wind Farm or other farm entity who desires to use the two fenced-
22 in agricultural meadow pastures and maintain or create the necessary license agreement for their
23 use.
- 24 ● Work with Maple Wind Farm to have the farm consider converting the southern part Old Farm
25 Road to a human use only trail and in exchange for granting Maple Wind Farm a perpetual
26 easement agricultural use of the 25’ utility road right of way from Route 2.
- 27 ● Maintain the two meadows as open land whether grazed or not; Brush hog each of the meadows
28 at least every three years.

29
30 Maple Wind Farm, the current farm leasee may use the “lower meadow” and a meadow along the
31 powerline right-of-way for grazing cattle. Maple Wind Farm has a right-of-way for agricultural purposes
32 over the main farm road on the Andrews Community Forest extending from the Dyer-Chadwick property
33 to Maple Wind Farm’s upper meadow. The Town has a right of way over the northern edge of Maple
34 Wind Farm’s upper meadow. The Town will work with Maple Wind Farm to ensure compatible shared
35 use of these two roads and rights of way, and to accommodate a high tensile electric fence around their
36 grazing area in the community forest’s lower meadow. A gate through the fence will allow for public
37 access to the meadow when the pasture is not in use for grazing. When the pasture is in use, the “cutover
38 trail” will be closed.

39

1 There may be opportunities in the forest for a community garden/orchard, and agricultural education and
2 demonstration projects. Under the Conservation Easement, agriculture is permitted where the forest has
3 already been cleared. The ACF Committee will remain open to proposals for alternative uses of the
4 agricultural lands, but appreciates maintaining a long-term, mutually-beneficial agricultural partnership.

5
6 **9. Education (Daniel + Jeanette Malone)**

7 The ACF offers abundant educational opportunities and should exploit the natural features and cultural
8 history of the Andrews Community Forest to provide enriching educational experiences for community
9 members from elementary school students, college students, and curious adults.

11 Possible educational opportunities include:

- 12 • Climate and Biodiversity monitoring programs
 - 13 • Trail building and maintenance (in partnership with VYCC)
 - 14 • Host community events with an educational component.
 - 15 • Tree/bird identification programs
 - 16 • Sustainable forestry and forest products education
 - 17 • Sustainable agriculture education
 - 18 • School field trips on ecology and cultural history
 - 19 • Outdoor skills training about responsible trail use (respecting wildlife, other trail users, natural
20 resources, etc.)
 - 21 • Kids summer camps and after school programs
 - 22 • Seasonal guided hikes highlighting forest ecology
 - 23 • Navigation and orienteering workshops
- 24

25 **9.1 Educational Objectives and Actions**

26
27 **Objective 1:** Provide educational materials, demonstrations and tours about natural communities,
28 biodiversity, cultural history, the working forest, and good stewardship practices using the forest as a
29 model and example of the value of healthy forests to the community.

- 30 • Place interpretive signage throughout the forest about natural communities, stewardship, and
31 cultural history.
 - 32 • Identify locations for birding and viewing wildlife.
- 33

34 **Objective 2:** Include local students and community members in data gathering/analysis.

- 35 • Monitoring of trail use
- 36 • Monitoring of invasive species

38 **Objective 3:** Partner with the schools and organizations listed above to hold programming in the forest.
39 Use timber management activities as an opportunity to educate the community about proper forest
40 management.

- Action 1
- Action 2

Objective 4: Education about land and original people recognition

- Reserve a portion of the kiosk to share history of Abenaki use of the land.
- Recruit people who can speak knowledgeably about Abenaki uses and care of the land (for example, hosting authors for a book club, perhaps in conjunction with the Richmond Free Library, Conservation Commission, UVM, VYCC, others?).
- Continue to seek advice from authorities including Indigenous peoples’ Chiefs, organizations such as Richmond Racial Justice, and individuals with links to or knowledge of indigenous culture. About naming trails and places and rename to reflect Abenaki heritage, as already included in MP2

9.2 Potential Education Partnerships

- Richmond Elementary School
- Camels Hump Middle School
- Mount Mansfield Union High School
- University of Vermont Field Naturalist Program
- University of Vermont Rubenstein School and Environmental Studies Program
- Essex Technical School
- Vermont Youth Conservation Corps
- Abenaki Nation of Missisquoi, The Nulhegan Band of the Coosuk Abenaki Nation, Richmond Racial Equity
- Green Mountain Audubon Center, Birds of Vermont Museum
- Boy and Girl Scout Troops
- Maple Wind Farm
- Nature Conservancy
- Vermont Land Trust, Richmond Land Trust
- Richmond Recreation Committee
- Radiate Art
- Vermont Forests, Parks, and Recreation
- Summer Camps: Mount Mansfield Modified Union School District (MMMUSD) and MMMUSD,Part 2 After School and Summer Camps, Our Community Cares Summer camp
- Green Mountain Orienteering Club

[BE: I agree with putting this close to the end. However, it should lead with the Conservation Easement, as noted earlier. The Town Plan deserves mention for the objectives it sets. The Zoning Regulations are binding, though, and a brief commentary and hyperlink to those would be helpful here. Comments in the first paragraph are mine.]

1 **10. Legal Agreements on the Property (Wright)**

2 There are many [several?] agreements, rights-of-way, and easements that are key to the management of
3 the forest. *[BE suggests: The Richmond Town Plan also establishes policies to use in guiding ACFC*
4 *decisions. The Town’s Zoning Regulations come into play as well, particularly in constructing new trails*
5 *and infrastructure on ACF slopes above 20% in pitch.*

6 **10.1 Agricultural Lease**

7 Maple Wind Farm is the adjoining landowner, and that land includes the remaining acres of the original
8 Andrew farm. Maple Wind Farm has historically used eight acres of what is now the community forest
9 for grazing cattle. Both parties are interested in continuing this arrangement and can explore the
10 possibility of a long-term agriculture license agreement. Vermont Land Trust, as conservation easement
11 holder would need to approve any such use license agreement.

12 Should Maple Wind Farm return to using one or both open meadows, the Committee wishes to retain a
13 crossover trail across the lower portion of the pasture linking the VELCO access road with the old farm
14 road to the east. This trail would be open anytime cows are not grazing in the pasture; when cows are
15 grazing, the Committee proposes closing this trail and installing appropriate signage to redirect visitors to
16 other routes on the property.

17 It is noted that the southern side of the lower agricultural meadow is on land that is apart of the former
18 Andrews’ homestead. The committee should work with this residential neighbor to continue accessing
19 this lower meadow trail.

20 **10.2 Powerline Rights-of-Way: VELCO Wright updates**

21 A VELCO powerline, and its 150’ east / west utility easement right of way runs through the middle of the
22 community forest. VELCO needs frequent vehicular road access to the utility right-of-way for
23 maintenance and repairs to the powerline. In 2018, VELCO upgraded improved the utility access road
24 from the forest entrance on Route 2 to the powerline right of way ; VELCO used the upper landing area to
25 stage the utility road their work. Following this 2018 work, VELCO re-seeded the landing and the road
26 above the landing and installed waterbars on the road below the landing.

27 *The Town (with the Committee) has worked for three years with VELCO on a 25’ wide the utility road*
28 *easement right of way agreement, requested by VELCO. This utility road right of way is located in the*
29 *existing utility road heading north from Rte. 2 to the VELCO and GMP utility lines on the property. The*
30 *Town will receive \$11,549.45 from VELCO for granting this utility road right of way easement.*

31 *Additionally, VELCO’s insurance provider has listed the Town of Richmond as additionally insured, and*
32 *VELCO installed two rows of split rail fencing and signs to help keep the public away from the now*
33 *unused utility road bridge abutments under the power lines. This new utility road easement will likely be*
34 *recorded in early 2025.*

35 *Approval by Vermont Land Trust and the Selectboard is required for any changes in easement*
36 *agreements.*

37

1 **10.3 Powerline Rights-of-Way: Green Mountain Power Wright updates**

2 Green Mountain Power has a 100'-125' utility right-of-way adjacent and north of the VELCO line in the
3 same powerline corridor.

4
5 Within each of the two utility corridors, VELCO and Green Mountain Power (GMP) manage vegetation
6 growth. The Committee will work to better understand the vegetation management goals and practices,
7 the landowner's (Town's) rights, to advise the Selectboard to make an informed decision about vegetation
8 management within the Powerline corridor, and to communicate this decision broadly to Community
9 Forest visitors.

10 At certain periods, VELCO and or Green Mountain Power may need to close some or certain parts the
11 community forest to perform utility line maintenance and upgrade projects. VELCO and GMP should
12 coordinate with the Town and the committee to prepare for such events and fully inform the public of the
13 closure.

14

15 **10.4 Legal Agreements Management Objectives**

- 16 ● Develop agreements that allow partners to work within the forest while limiting the impact (both
17 ecological and human impact) of such work.

18 **10.5 Legal Agreements Management Actions**

- 19 ● Work with VELCO and GMP to understand and select vegetation management strategies in the
20 powerline right-of-ways which are safe, effective, and environmentally responsible.
21 ● Communicate with the public about grazing plans or powerline management activities that may
22 influence the public's experience on the property.
23 ● Manage public use during powerline work or grazing periods to mitigate public safety hazards.
24 ● **Maintain** positive working relationships with Maple Wind Farm, VELCO, and Green Mountain
25 Power to ensure that their use of the property is compatible with public visitation.
